Interview Part 2

Da Vinci 3rd place in legacy/history

I include your role model here.

When I was young I always liked watching videos about history a long time ago and mysteries such as the ~~Bermuda Triangle~~ and the mh370. I tried to understand all these mysteries and war in the past and I quickly became familiar with all these strange mysteries. I remember when I was watching the ~~bright side bermuda triangle mystery~~ and it was my favourite mystery of all time, having planes and ships disappearing without a trace. This has led me and my team in ~~Da Vinci~~ getting 3rd place in legacy. I would like to thank all my teammates because they were supportive whenever I didn't feel like persevering and also getting us to this achievement. I would also like to thank our coach because she helped us prepare and organised all our activities to do through the preparation time.

Trinity Grammar Academic ~~excellence in english~~

I always liked reading books when I was young, any books, fiction, ~~no fiction~~ or even anthologies. Books always caught my interest and understanding the author's mystical world, if it was fiction, or maybe a vivid description or real life, if it was non fiction. My favourite author is ~~Tui T~~ Sutherland for the Wings Of Fire series because she has described a whole new world, complete with dragons and all their history, vividly enough for someone to only read the first books and understand the world. This has led me to our annual prize giving to grant me an award for academic excellence in english. I would like to thank my English teacher, for making sure I understand all the concepts in a book, and my parents for giving me access to all these wonderful books.

Top 10% ~~maths olympiad~~

Before I even understood what numbers ~~where~~ I started pressing buttons on my Mother's calculator. Understanding these strange symbols has always been a passion of mine. I liked seeing how different equations changed how numbers merged together or decreased in value. Now that I am older and interested in figuring out solutions to theories and infinity related questions. Infinity has always puzzled me, is it a real certain number or is it just a concept of a huge number? I also like solving questions like the grandi's series and the infinite hotel paradox. All this has led me to getting the pin for top 10% in maths olympiad. I would like to thank my ~~maths~~ teacher, for she was always patient and organised everything behind the scenes, and my parents for helping me out with maths problems

Note:

This is a good response to the interview question, Kerry! You were able to anchor your response to the 4 tenets comprehensively. However, I am noticing that you have a problem with proper casing or capitalisation. In English, a capital letter is used for the first word of a sentence and for all proper nouns (words that name a specific person, place, organisation, or thing). In some cases, capitalisation is also required for the first word in a quotation and the first word after a colon. Heed to these to improve more.
