

Renewable Energy Sources. Part 1 Topic 4 23/1/23

I am relentlessly filled with disgust as I witness^{ed} ^{tons} tonnes of unsustainable fossil fuels burnt and consumed as a result of human greed and folly. It is our moral duty that we protect this planet for the benefit of everyone. Our world is dying. Caliginous wisps of smoke are drawing out the last breaths of society. Feel the unwavering urgency of this situation.

For too long, human greed and folly has contaminated this wonderful world. As governments turn a blind eye onto this globalised issue, millions of innocent people ^{were} affected by the constant pollution of non-renewable energy sources. Ranging from fossil fuels, such as gas, oil and coal. Millions of emaciated suffering slaves are coerced across the world to work in factories [^] ^{Add a comma!} where pillars of asphyxiating smoke climbing through your exsufflation encumbered lungs is considered as a ~~norm~~ norm. This is a disgusting violation of human rights. It needs to stop! Climate change isn't a walk in the park. A change to renewable energy like wind and water will be fruitful as it will turn the world into a cleaner place.

Apart from the people and environment teetering on a seesaw between life and death, billions of dollars are fueled into manufacturing and facilitating these factories. Consider the ripple effect, where countries sink further into death traps of unpayable debt. A collapsing economy weighing down the shoulders of citizens. Then, imagine the perpetual ~~potential~~ potential of renewable energy farms. It was estimated by Bloomberg New Energy that it is \$63 cheaper per

mega ~~watt~~ watt to produce energy from a wind farm. when compared to a coal factory. This dire situation called for a beacon of change. Renewable energy prices are steadily dropping as more of these efficient farms can be built. A ray of hope has shone down upon this atrocity as we are saved from the chasm of economical catastrophe.

Well, even if we do manage to be reliant on renewable energy sources? How would we manage to millions of job losses across the multi-million-dollar fossil fuel industry? Well, EPA has already set up a multitude of fanciable job prospects for people eager to join the fight for renewable energy. It won't be a loss for the industry either. Gas and coal companies are investing in solar power. It will only be a matter of time before the chains incarcerating us will be lifted and the world returns to a utopian state.

In conclusion, everyone needs to realise the magnitude of this malevolent crisis. The world is dying. The world is turning grey as more and more gas rises into the air. We need to stop. Entire ecosystems are perishing and melting away. The world is full of natural ~~the~~ beauty and energy. We need to grasp the power of this fascinating world we live in before it's too late.

Very well done with some valid points on your stance. However, it would have improved your argument if you used a combination of THOROUGH RESEARCH and careful word choice in order to present your opinion strongly and get the reader to agree with you. Though there are several effective emotional appeals used throughout this essay, they could be stronger in order to sway readers to a particular point of view; using more rhetorical questions could further enhance its emotional appeal. Moreover, your piece needs more evidence! Find a highly respected leader in the field or industry you're addressing who has the same opinions about the topic; carefully incorporate direct or paraphrased quotes from them in arguments to give more evidence of their credibility. Showing that someone else with a potentially recognisable name supports your stance may add a crucial element of believability to your argument. Please take note of the suggestions!
