

*It would be best if there's a title for your essay.*

The classroom is **the** foundation to our education and learning, the place of knowledge and is a stepping-stone to our future. It is also a place where we all come together to experience the joys of learning, a place where we grow socialise in our environment. However, it is also a place of immense change, where technology and our knowledge is advancing.

From this, an ambiguous question arises: should cellphones be allowed in the classroom?

The answer is distinctive and crystal-clear. We must invest in ~~cellphones~~ **cell phones** for the sake of our future and the growing potential of our students. Embracing the use of cell phones will be essential for students. It produces more knowledge than we would ever be able to teach and permits them access to outlets they have never known before. It is portable and reliable, unlike the way teachers teach, and provides useful and educational resources that not only expand your knowledge, but you can review the resources anytime you want. Prohibiting ~~cellphones~~ **cell phones** and online learning will only limit the students' potential.

We must ~~in~~ **have** the power of education and collaboration. Providing classrooms with ~~cellphones~~ **cell phones** will extend their intelligence, allowing kids to learn and develop their brains. It will permit students to keep track of important dates using calendars in history, research facts in science and much more. It will provide students with real-time and reliable information, and using emails, they can share their new discoveries. Students can cooperate with other students to complete difficult tasks and can share ideas related to the topic. It will also enable access to peer-reviewed content, allowing classmates to learn from each other.

*support this with proper evidence to make this more convincing and reliable.*

Finally, we must invest in the power of creativity. A wide variety of limitless activities can be available on the internet, and many enjoy them. It will provide permission to creative outlets, allowing students to express themselves in a safe environment. Allowing students to use creative apps, the use of phones will increase their imagination and creativity.

Ultimately, I believe that phones should exist in **the** classroom, as they provide many benefits as collaboration, creativity and education purposes. Let us make the wise choice and empower the use of cellphones in class.

*Note:*

*This is a good essay. The structure follows a logical organisation. However, your arguments are not supported with any evidence. You have to research on the internet and back them up in order for them to be credible and stronger. Meanwhile, your conclusion is not very good. The conclusion paragraph should begin by restating your thesis, and then you should broaden back out to a general topic. But, you did well by ending it with a closing statement. Mark: 48/50*
