

Wulfric scratched his quill as he wrote a book for the king. It was to be elegant and perfect, but Wulfric had no clue what to write. He was in the library looking at books that he might use for inspiration first. He looked at books about knights and saw many other books like how to be a noble king. The library was colossal with 10 metre shelved stacked with books to the top. The royal red carpet glistened as Wulfric stepped on the golden linings.

When he got to the economics section, all the books were old and scruffy. Wulfric was about to walk away when a gleaming book caught his eye. As he picked up the heavy tome, he opened it and started reading the riddles and poems. Outside the stained-glass windows, one merchant got his cart filled with goods as another one all disappeared. "I see you have the enchanted book of the economy," told the witch like figure behind him. Her smirk on her green face seemed as if a lot of things would change.

Wulfric asked the book to take money from the poor and rich. After the money was taken all of it would be given to him. Wulfric watched as all the money started to build up in front of him. Some light green and some so dirty you would never have known how much money it was. Wulfric wept in joy as he ran to his mother to tell her about the money. He noticed that his mother might not approve. Wulfric stuffed a pile of money into his bag and walked outside to have a look at how others were doing. While Wulfric was imagining a perfect place where everyone was happy. So many people had already starved to death. The royal family was all right but after a month they became extremely poor and were also in need of food. The whole feudal system was in grave danger." What have I done?" Wulfric asked himself. Ireland had started to invade England. Many were dying everyday due to raids. Most citizens were becoming hostages.

Wulfric asked the book if everyone could have their money back. The book did nothing. Wulfric noticed that he had asked for too much and that now the book would not respond. Wulfric tried to give supplies to everyone, but England was too weak and Ireland was about to take over. Wulfric now knew that he was too greedy and should have made the economy better by using the book. He had just made it worse and now many were suffering. Greed is bad.
