

INTERVIEW QUESTION: Who is your role model, and why? Describe a time when you faced a moral or ethical dilemma and how you handled it.

My role model is Winston Churchill but if my role model is still alive it's got to be Elon Musk. I chose these two specifically because they both persevered through very harsh and difficult times, for example Winston Churchill facing all kinds of difficulties in the war like evacuations, bombings and attacking the enemy. Despite all this he still managed to keep most of his people safe while defeating the enemy, in addition to winning a Nobel Prize in Literature. I chose Elon Musk as one of my role models because he achieved things that most people cannot achieve. From being born into a middle class, being bullied in early life and also financial difficulties in his early life he is now CEO of a few of the world's most notable companies like PayPal to SpaceX to the well-known Tesla. But he overcame bigger difficulties on the way to become the world's richest man like being on the brink of bankruptcy. People not believing in him only for him to persevere through and prove them wrong.

I remember that I persevered through many arguments with friends and big ones with the friend group. But I just never gave up or kicked anyone out of the group. Sometimes I lost my mind but never lost hope. Sometimes I got in verbal fights but controlled myself not to get physical. Even when the group was split. I worked with some 'friends'(I guess) to fix it.

A time traveling confusion

A accidental discovery

As 13 year old Ava Lovelace, great granddaughter of a well renowned mathematician, glared at the abnormal data on her punch cards. The propagation rate of the specimen was preposterous. As she stared at the numbers and data with eyes shining with intellectual pedigree and bewilderment. All of a sudden she gasped. "No...th...thi...this can't be!"she exclaimed. "It's not hastily. It... it's skipping through time!" That was when the thought hit her... the centuries-old conspiracies of time-altering plants have finally been proven. "What a contingency"muttered Ava Lovelace. "What a contingency"she repeated in astonishment.

While lost in her thoughts she abruptly remembered that more of the same specimen of plants were being grown in the greenhouse where her tutor, Nikola Tesla was. So he hurried about until she reached the greenhouse to inform Nikola Tesla about her ground-breaking discovery. When she arrived to inform Nikola Tesla of her discovery all she got was. "Extraordinary". As he watched the other plants open new windows to different eras. Before Ada could ask about the rows and columns of the specimen all lined up together. The door erupted open. "Step away from the Everywhen Fern!"a voice necessitated. "By order of Her Majesty's Temporal Constabulary!"

Just as a silhouette approached, Ada jolted awake only to be suffocated by the smoke choked air. As Ada squirmed out of her bed. She took a glimpse out the window to the sight of London set ablaze, zeppelins aloft in the sky and the Thames was boiled arid. "No," she murmured,"that's not how the Great War was meant to go." She numbed.

Great War? What Great War? Ada didn't remember there was a Great War. As her memory was being rebooted.

She saw the team punching the time clock in the heart of the Great Fire of London, 1666. "Don't forget," Ada bellowed over the blasts of the flames, "We can't change anything! We're here to preserve the timeline, not modify it!" Zahi nodded solemnly, then froze. "Ada," he said ploddingly, "wasn't your family supposed to make a major scientific breakthrough because of this fire?" Ada's face blanched. "Oh no. We're the ones who were supposed to start it."

In a confidential compartment under London, Zahi meticulously aided the Chronos Tree, its branches stretching into different multiverses; it looked like it took up singularity. But the timeline is still stabilizing. "We'll need to observe carefully." Jack lounged against a temporal stasis pod, smirking. "Well then, who's here for a hasty trip to ancient Egypt and back? I perceived they've got a sphinx that needs a new nose."
