

#1 (First paragraph): a. Strengths:

- Clear thesis statement outlining the importance of systemic change
- Effective introduction of the climate change issue

b. Weaknesses: Lack of specificity Your opening paragraph could benefit from more concrete examples or statistics to illustrate the urgency of climate change. For instance, when you mention "rising temperatures, extreme weather events, and disruptions to ecosystems", you could provide specific data points to make your argument more compelling.

c. Exemplar: "Climate change poses one of the most significant threats to our planet, with global temperatures rising by 1.1°C since the pre-industrial era, leading to more frequent extreme weather events such as the record-breaking heatwaves experienced in Europe in 2022."

#2 (Third paragraph): a. Strengths:

- Good explanation of how systemic changes can facilitate individual actions
- Effective use of examples to illustrate the point

b. Weaknesses: Overreliance on generalisation Your argument could be strengthened by providing more specific examples or case studies. For instance, when you mention the Green New Deal, you could elaborate on specific provisions or potential impacts to make your point more convincing.

c. Exemplar: "For instance, comprehensive legislation aimed at reducing carbon emissions, such as the Green New Deal in the United States, has the potential to reshape energy production by mandating a transition to 100% renewable energy by 2030, enhance public transportation through increased funding for electric buses and rail networks, and invest in renewable resources by providing tax incentives for solar and wind power installations."

#3 (Final paragraph): a. Strengths:

- Strong concluding statement that reinforces the main argument
- Effective summary of key points

b. Weaknesses: Lack of future outlook While your conclusion effectively summarises your main points, it could benefit from a forward-looking perspective. Consider adding a

statement about the potential consequences of inaction or the positive outcomes of implementing systemic changes.

c. Exemplar: "Only through systemic reform can we hope to mobilise the collective effort required to confront one of the most pressing challenges of our time, potentially averting catastrophic temperature rises of 3°C or more by the end of the century and preserving a livable planet for future generations."

Actionable task: Rewrite your opening paragraph, incorporating specific data points or examples to illustrate the urgency of climate change. Focus on providing concrete evidence that underscores the need for systemic change.

Overall score: 44/50
