

#1 (Introduction): a. Strengths:

- You effectively introduce the topic of climate change and its significance.
- You present the main argument about systemic changes versus individual actions.

b. Weaknesses: Lack of Clarity and Focus Your introduction could benefit from more clarity and focus. The statement "Even though individual actions can create a tipping point, being systematic is climatically better" is somewhat confusing and doesn't clearly express your thesis. Additionally, the phrase "climatically better" is vague and informal.

c. Exemplar: "While individual actions play a role in addressing climate change, systemic changes are more effective in mitigating its impact on our planet."

#2 (Energy Recycling Paragraph): a. Strengths:

- You provide specific examples of energy recycling methods.
- You include a relevant statistic about CO2 emissions from fossil fuels.

b. Weaknesses: Inconsistent Tone and Structure Your writing in this section shifts between formal and informal tones, which can be distracting. For instance, you use phrases like "Did you know" and "We could save the Earth," which are more suited to casual conversation. The paragraph also lacks a clear structure, jumping between different ideas without smooth transitions.

c. Exemplar: "One effective systematic change is the implementation of energy recycling methods. For instance, waste heat recovery from manufacturing processes can be converted into usable steam or electricity, reducing overall energy consumption and CO2 emissions."

#3 (Conclusion): a. Strengths:

- You restate your main argument about systematic changes.
- You provide a call to action for readers.

b. Weaknesses: Lack of Depth and Specificity Your conclusion lacks depth and fails to provide a comprehensive summary of your arguments. The statement "Go vote for changes in the law that attack climate change!" is too vague and doesn't offer specific guidance on how readers can contribute to systemic changes.

c. Exemplar: "In conclusion, systematic changes offer a more comprehensive and effective approach to combating climate change. By implementing policies that address energy production, carbon footprints, and the root causes of global warming, we can make significant strides in protecting our planet."

Actionable Task: Rewrite your introduction paragraph, focusing on clearly stating your thesis about the superiority of systematic changes over individual actions in addressing climate change. Ensure that you provide a brief overview of the main points you will discuss in the essay.

Overall Score: 40/50
