

Section 1:

#1 (First paragraph): a. Strengths:

- Strong thesis statement clearly articulating the main argument
- Effective use of contrast between individual actions and systemic changes

b. Weaknesses: Main issue: Overgeneralisation Your statement that individual actions are "mere drops in an ocean of need" oversimplifies the complex relationship between personal and systemic change. While emphasising the importance of systemic solutions, it's crucial to acknowledge that individual actions can collectively contribute to meaningful change and often drive systemic shifts.

c. Exemplar: "While these actions are important and can contribute to broader change, focusing solely on individual responsibility can distract from a critical truth: systemic changes are far more crucial in effectively addressing climate change."

#2 (Third paragraph): a. Strengths:

- Clear explanation of how economic structures perpetuate environmental damage
- Effective use of specific examples (fossil fuel subsidies)

b. Weaknesses: Main issue: Lack of specificity Your discussion of systemic changes lacks concrete examples. You mention "eliminating fossil fuel subsidies and investing in sustainable infrastructure" but don't provide specific policy proposals or real-world examples of successful systemic changes.

c. Exemplar: "By advocating for systemic changes—like implementing carbon pricing mechanisms, redirecting fossil fuel subsidies towards renewable energy projects, and investing in sustainable public transportation infrastructure—we can create an environment where individual actions are supported and amplified."

#3 (Fifth paragraph): a. Strengths:

- Effectively conveys the urgency of the climate crisis
- Good use of an example to illustrate the impact of systemic change

b. Weaknesses: Main issue: Vague argumentation Your argument about the immediate impact of systemic changes lacks supporting evidence. The statement "Systemic changes can lead to rapid, widespread adoption of sustainable practices" needs specific examples or data to strengthen its credibility.

c. Exemplar: "For example, when countries commit to ambitious climate targets through legislation, they can mobilise resources, technologies, and innovations that individuals alone cannot achieve. The UK's Climate Change Act, which set legally binding carbon budgets, has led to a 44% reduction in emissions between 1990 and 2019, demonstrating the power of systemic change."

Actionable task: Revise the third paragraph, focusing on providing specific examples of successful systemic changes in addressing climate change. Ensure you identify at least two concrete policy measures or initiatives that have led to significant reductions in greenhouse gas emissions.

Overall score: 42/50
