#1 (Introduction and first argument):

a. Strengths:

- Clear thesis statement introducing the main arguments
- Effective use of statistics to support the argument

b. Weaknesses: Lack of coherence Your introduction could be more cohesive and engaging. The transition from the thesis to the first argument is abrupt, and you haven't provided a strong hook to capture the reader's attention. For instance, you state, "Every community should have self-driving electronic vehicles. Why? That is because, you can prevent traffic accidents..." This sudden shift doesn't allow for a smooth flow of ideas.

c. Exemplar: "Imagine a world where traffic accidents are a thing of the past, where our environment thrives, and where stress melts away during your daily commute. This future is within our grasp through the widespread adoption of self-driving electronic vehicles in every community."

#2 (Second argument):

a. Strengths:

- Good use of real-world examples (Tesla)
- Inclusion of expert opinion (Dr Alec)

b. Weaknesses: Underdeveloped argument Your second argument lacks depth and specificity. While you mention the decrease in carbon dioxide emissions, you don't provide concrete figures or explain how self-driving cars contribute to this reduction. For example, you state, "Scientists have hope that if more car brands use electric, we might just be solving 75% of global warming!" This claim needs more substantiation and a clearer link to self-driving technology.

c. Exemplar: "Self-driving electric vehicles not only reduce carbon emissions through their electric power source but also optimise driving patterns for maximum energy efficiency. Studies show that autonomous vehicles can reduce fuel consumption by up to 20% through smoother acceleration and deceleration, further mitigating environmental impact."

#3 (Conclusion):

a. Strengths:

- Concise restatement of main points
- Clear personal stance

b. Weaknesses: Lack of impact Your conclusion, while summarising the main points, doesn't leave a lasting impression on the reader. It simply restates the arguments without providing a compelling final thought or call to action. For instance, you conclude with, "I strongly believe that we should have self-driving electronic vehicles." This doesn't inspire further thought or action from your audience.

c. Exemplar: "As we stand on the cusp of a transportation revolution, the choice is clear: embracing self-driving electronic vehicles means choosing a future with safer roads, cleaner air, and calmer commutes. It's time for us to take the wheel and steer our society towards this brighter, more sustainable future."

Actionable task: Rewrite your introduction paragraph, focusing on creating a compelling hook and smoother transitions between ideas. Ensure that you engage the reader from the first sentence and clearly set up your three main arguments.

Overall score: 40/50
