Section 1:

#1 - Introduction Paragraph Strengths:

- Strong hook that creates a vivid image of a technology-dominated future
- Clear thesis statement expressing your position against digital transformation

Weaknesses: Underdeveloped scenario → Your opening scenario could be more detailed and balanced. The phrase "Imagine a world where everyone stared at their devices" presents an oversimplified view.

Exemplar: "Imagine walking through a city where the gentle hum of conversation has been replaced by the tapping of screens, where face-to-face interactions have become rare commodities in an increasingly digital landscape."

#2 - Second Paragraph (Jobs Impact) Strengths:

- Practical example using restaurants to illustrate economic impact
- Clear cause-and-effect relationship established

Weaknesses: Limited perspective → Your argument about restaurants and delivery apps presents only one side. The phrase "they can't make any money" makes an absolute claim without considering adaptability.

Exemplar: "Traditional restaurants without digital presence face significant challenges, as an increasing number of customers prefer the convenience of delivery apps, potentially threatening establishments that haven't adapted to this digital shift."

#3 - Cultural Identity Paragraph Strengths:

- Strong connection between technology use and cultural preservation
- Effective use of expert opinion to support your argument

Weaknesses: Lack of specific examples → Your discussion about cultural identity remains abstract. The phrase "Many traditional celebrations, food and other practices won't be remembered" needs concrete examples.

Exemplar: "Traditional street festivals, local food markets, and community gatherings that have defined our city's character for generations risk becoming mere digital memories as people increasingly engage with virtual alternatives."

Actionable Task: Rewrite your cultural identity paragraph by including at least three specific examples of local traditions or practices that could be affected by digital transformation, explaining precisely how each might be impacted.

Overall Score: 41/50

Section 2:

Should cities transform themselves in digital hubs?

~~Imagine a world where everyone stared at their devices.~~ [Imagine a world where everyone stares at their devices.] People are really concentrated on their phones, not aware of their surroundings. Nobody would want that to happen. I strongly believe that ~~cites~~ [cities] should not transform themselves into digital hubs. Let me tell you why.

#1 ~~Firstly, if cities transform, people will lose their jobs.~~ [Firstly, as cities undergo digital transformation, many traditional jobs may be at risk.] For example, if a restaurant doesn't have a delivery service via apps, they can't make any money. This is because ~~the~~ people are going to order online via apps.

Furthermore, people stop engaging with people but rather engage with their devices. Uncle nomad sadly explained, ~~I've been here for 40 years to entertain people and now they don't even look at me when I give them food.~~ ["I've been here for 40 years entertaining people, and now they don't even look at me when I serve their food."] They are just on their phones now.

#2 Additionally, ~~the there~~ [there] is a risk that cultural identity will be lost. Many traditional celebrations, food and other practices won't be remembered. People will stick to their phones. When you are in the digital world, you aren't aware of your surroundings and you can find it hard to recall things. Experts say that the memories functionality in ~~adults brain~~ [adults' brains] deteriorate when using the internet daily. As a result, if we evolve ~~on~~ [in] using tech for everything, you will likely forget many other things in the past.

#3 Finally, ~~the~~ elderly people find it challenging to use technology. It might be too complex for them to understand. What if they press the wrong thing and make a big mistake? It will be really annoying to sort out. Moreover, many older generations can't see very well. The small devices make the symbols unclear to them. For instance, when buying things, using cash will be a lot more efficient. Also, the bright screens may damage their eyes. This will lead to ~~should~~ [shoulder] and neck pain, headaches and blurred vision.

In conclusion, I think that we should not change cities to digital hubs. It will affect the elderly people, businesses and cultural identity. Life is much more simple and better. Share this to others and perhaps consider a world that is well balanced ~~the~~ [in the] use of technology while maintaining physical interactions.
