

Section 1:

#1 (First paragraph): Strengths:

- Strong opening with a thought-provoking question that engages readers
- Creative use of future perspective to emphasise environmental concerns

Weaknesses: Inconsistent Voice and Tone → Your narrative switches between present and future perspectives, which creates confusion. Your opening states "I have come as a global citizen from 2060" but then shifts to present-day concerns. Your phrases like "have you ever wondered" and "I have seen the answer" need better connection to maintain the time-traveller perspective.

Exemplar: "As a visitor from 2060, I've witnessed the devastating reality of what happens when we ignore our planet's health. In my time, our oceans overflow with waste, wildlife exists only in digital archives, and clean air has become a luxury few can afford."

#2 (Second paragraph): Strengths:

- Effective use of specific examples to illustrate environmental damage
- Strong emotional appeal through vivid imagery

Weaknesses: Structural Organisation → Your ideas jump between different environmental issues without clear transitions. Your discussion moves from "plastic clogging oceans" to "landfills" to "drinking water" without establishing clear connections. The paragraph needs stronger linking phrases to guide readers through these related but distinct problems.

Exemplar: "In 2060, our negligence has created a devastating chain reaction: plastics choke our oceans, decimating marine ecosystems, while expanding landfills devour what little remains of our forests and farmland."

#3 (Final paragraph): Strengths:

- Powerful call to action that emphasises individual responsibility
- Effective use of empowering language to motivate readers

Weaknesses: Message Coherence → Your concluding message combines too many ideas without clear focus. Your statements about "eco logical knowledge," "separating trash," and "rewriting history" need better organisation to create a more impactful closing argument.

Exemplar: "Your actions today will shape our world in 2060. By embracing recycling and sustainable practices now, you're not just managing waste – you're preserving hope for future generations. The power to rewrite our future lies in your hands."

Actionable Task: Rewrite your entire piece while maintaining consistent perspective as a time traveller from 2060, ensuring each statement reflects that future viewpoint rather than mixing present and future perspectives.

Score: 38/50

Section 2:

#1 ~~Hello students~~, ~~Have~~ [Hello, students! Have] you ever wondered what the world will look like in decades if we don't take care of it today? ~~I have seen~~ [I've seen] the answer, ~~it~~ [- it] is terrifying. I have come as a global citizen from 2060, ~~where if you neglect the planet even once,~~ ~~the consequences are things like~~ [where neglecting our planet has resulted in] our oceans filled with trash ; [,] wildlife disappearing and even clean air is [becoming] expensive. ~~But~~ [. But] it doesn't have to be this way if you can use ~~renewable enviromant~~ [renewable environment] friendly things ~~and etc~~ [and more]. ~~So if you would like to be a responsible sustainabilaty hero then reecyle, now!~~ [So if you'd like to be a responsible sustainability hero, start recycling now!]

#2 ~~Secondly~~, ~~in my world~~ [In my world,] the lack of recycling ~~urns~~ [turns] into a big bad environmental damage. Plastic that could have been reused is now clogging oceans, killing underwater life and breaking ecosystems. Landfills are packed with rubbish, ~~leaving~~ [, leaving] nearly no room for forests and farmland. Imagine living in a world where drinking water is a ~~luxary~~ [luxury] and most wildlife only live in fantasy. This is what happens if you waste things that are perfect to use.

#3 Lastly, using your ~~eco-logical~~ [ecological] knowledge [,] you would know that the question isn't whether you make a difference ; [;] it is whether you will choose to ~~every~~ [. Every] action that you will do today will make the world tomorrow ~~by~~ [. By] separating your trash, reusing perfectly good to use materials ; [,] and supporting recycling programs ; [,] we will create a better ~~more~~ [and more] healthy future. ~~recycling~~ [. Recycling] isn't just about waste, ~~its~~ [it's] about hope and ensuring future ~~generations~~ [generations] will have ~~have~~ a clean planet [.] ~~you~~ [You] hold the power to rewrite history. ~~Start~~ [. Start] recycling today and you will become ~~heros~~ [heroes] we really need in 2060. So what are you waiting for? ~~lets~~ [Let's] all go recycle any possible plastic we can see!
