

## Section 1:

### #1 (First paragraph): Strengths:

- Powerful imagery that creates a vivid emotional impact through detailed descriptions of homelessness
- Effective use of sensory details like "rusty fold-out table" and "minuscule portable fridge"

Weaknesses: Underdeveloped Transition → Your opening paragraph, while evocative, makes an abrupt shift from describing homelessness to introducing automation and UBI. The phrase "As you tremble under the grave of financial debts, robots move around" creates a jarring transition that could be more smoothly integrated.

Exemplar: "These scenes of destitution may multiply as automation reshapes our workforce, with robots already beginning to replace human labour in various sectors. Universal Basic Income offers hope for preventing such devastating scenarios."

### #2 (Second paragraph): Strengths:

- Strong integration of statistical evidence to support claims
- Clear logical connection between automation challenges and UBI as a solution

Weaknesses: Incomplete Development → Your analysis of UBI experiments focuses solely on stress reduction and motivation, missing an opportunity to explore concrete economic impacts. The phrase "UBI is a sublime solution" would be more convincing with specific examples of economic benefits.

Exemplar: "UBI experiments worldwide have demonstrated multiple benefits: participants reported reduced stress, increased motivation to find meaningful work, and notably, many invested in education or started small businesses, creating new economic opportunities."

### #3 (Final paragraph): Strengths:

- Effectively connects UBI to broader social values and human dignity
- Strong concluding statement that synthesises main arguments

Weaknesses: Limited Scope → Your conclusion primarily restates previous points without expanding on future implications. The phrase "UBI is the bedrock foundation" could be enhanced by addressing potential implementation steps or long-term societal impacts.

Exemplar: "UBI represents more than economic support—it's a foundation for reimagining society, ensuring dignity for all whilst fostering innovation and social progress in an increasingly automated world."

Actionable Task: Rewrite your opening paragraph focusing on creating a smoother transition between the description of homelessness and the introduction of automation/UBI, perhaps by drawing explicit parallels between current poverty and future technological displacement.

Section 2:

#1 Envision a world where homeless people fill the streets to the brim. Their grim faces are only a symbol of the excruciating pain and suffering they have gone through. Torn, unpaid bills lay on the rusty fold-out table while images of numerous failed interviews ~~flashed~~ [flash] before their weary eyes. The memory of food from last year, saved as a precious jewel in their minuscule portable fridge ~~lay~~ [lies] there lingering in the homeless' minds. ~~As you tremble under the grave of financial debts, robots move around, silent but dangerous, replacing workers with their tireless metal arms.~~ [While many already tremble under crushing financial debts, the silent march of automation threatens to worsen this crisis, as robots with tireless metal arms replace human workers.] A testament to an automation revolution that threatens to shatter millions more dreams. Universal Basic Income illuminates a path forward, transforming these scenes of quiet desperation into moments of dignified choice.

#2 Economically, UBI offers a promising solution to the increasing automation of jobs. As technology advances, many workers face displacement in industries such as manufacturing, retail, and transport. According to a 2021 ~~accurate~~ [comprehensive] report, up to 800 million jobs globally could be lost to automation by 2030. UBI can act as a cushion, providing a stable income while workers transition to new roles or pursue reskilling and studying. For example, UBI experiments all over the world have countless participants who reported that they reduced stress and increased motivation to find better work, even though it did not significantly boost employment rates. UBI is a sublime solution to the world's automation takeover.

Socially, UBI helps to get rid of poverty and inequality. In countries such as America and China, the poverty rate was approximately more than 10%, with millions of individuals struggling to meet basic needs for food and survival. A nationwide UBI would ensure a basic standard of living, regardless of employment status. A study in Alaska, where citizens receive annual oil dividend payments, has shown that such income redistribution not only reduces poverty but also boosts local economies as people spend their additional income. Additionally, it provides people with the freedom to pursue education or creative endeavours without the constant pressure of financial survival. UBI is crucial for getting rid of homelessness and poverty.

#3 Finally, UBI acknowledges the dignity of every person by guaranteeing financial security. It reflects the belief that citizens have a right to share in the wealth generated by society, particularly when technological advances and wealth concentration leave many behind. Providing UBI would recognize [recognise] the value of work outside the traditional job market, such as caregiving or volunteering, which are often undervalued but essential.

~~All in all~~ [In conclusion], UBI is crucial for the economic status of the country, its positive social impact, and the dignity of the people who are homeless or are living in poverty. UBI is the bedrock foundation of our society and economy, ensuring a bright future for human beings.
