

Section 1:

#1: "What is happening to our world? Climate change, Global warming, and Greenhouse gases. These are all humongous problems on Earth. So what can we do? We can fix it. Help us fix the world by recycling, sustainably living, and by using less fuels."

Strengths:

- Engaging opening with rhetorical questions that draw readers in
- Clear call to action with specific solutions provided

Weaknesses: Sentence Structure Coherence → Your sentences are too short and choppy, creating a staccato rhythm that reduces impact. The frequent use of questions and brief statements like "We can fix it" diminishes the persuasive flow.

Exemplar: "Our world faces devastating challenges - from climate change and global warming to greenhouse gas emissions. However, through recycling, sustainable living, and reduced fuel consumption, we can work together to create meaningful change."

#2: "Climate change is an absolute problem to humanity. you can reduce the amount of gases and carbon dioxide you produce. This helps drastically and may even let us win our fight."

Strengths:

- Direct and emphatic statement about climate change's impact
- Provides actionable solutions with positive outcomes

Weaknesses: Transition Development → Your ideas jump from one to another without smooth connections. The abrupt shift from stating the problem to solutions needs stronger linking words and phrases.

Exemplar: "Climate change poses an absolute threat to humanity, but by reducing our gas and carbon dioxide emissions, we can make dramatic progress in winning this crucial fight."

#3: "Think about this. What if you don't do anything and leave Earth to die? Where will the future humans live? Is this a paradox?"

Strengths:

- Effective use of thought-provoking questions
- Creates emotional connection through future implications

Weaknesses: Argument Development → Your questions, while engaging, need supporting details to strengthen their impact. The concept of Earth "dying" and future implications requires more specific development.

Exemplar: "Consider the devastating consequences of inaction: if we allow Earth's resources to be depleted and its ecosystems to collapse, where will future generations call home?"

Actionable Task: Rewrite your first paragraph focusing on connecting your ideas with transition phrases and combining shorter sentences into more complex ones that maintain their emotional impact.

Overall Score: 39/50

Section 2:

#1 ~~What is happening to our world? Climate change, Global warming, and Greenhouse gases. These are all humongous problems on Earth. So what can we do? We can fix it.~~ [What is happening to our world? Climate change, global warming, and greenhouse gases have become humongous problems threatening Earth. Yet there is hope - we can take action.] Help us fix the world by recycling, sustainably living, and by using less fuels. From 2060, I've encountered many natural ~~disaster~~ [disasters] because of climate change.

#2 ~~Climate change is an absolute problem to humanity. you~~ [Climate change is an absolute problem to humanity. You] can reduce the amount of gases and carbon dioxide you produce. This helps drastically and may even let us win our fight. By doing this, you prevent extreme wildfires, land transformations and animal habitat loss. Recycling is simple but helpful. Place a bottle you find into the nearest recycling bin. One bottle at a time.

#3 ~~Think about this. What if you don't do anything and leave Earth to die? Where will the future humans live? Is this a paradox?~~ [Think carefully about the consequences: if we remain passive and allow Earth to deteriorate, where will future humans live? Is this not a paradox?] Well you see, by losing planet Earth, we lose our home, the place we lived on. Everything we treasured and adored ~~destructed~~ [destroyed] by us. So protect now so you can thrive later. So do what is right, or else we'll face fright!
