

## Section 1:

### #1 (First paragraph): Strengths:

- Vivid sensory details create a powerful emotional impact through the hospital scene
- Effective use of present tense to create immediacy and urgency

Weaknesses: Logic Flow → The opening paragraph, while evocative, presents a scenario that contradicts your eventual position supporting animal testing. Your dramatic scene of suffering appears to argue against the practice you later defend.

Exemplar: "Picture a world without animal testing: Hospital corridors filled with human subjects writhing in pain, their families grieving beside them. This is the alternative to ethical animal testing."

### #2 (Third paragraph): Strengths:

- Clear statistical evidence with specific numbers
- Strong comparative reasoning between human and rat populations

Weaknesses: Paragraph Structure → The paragraph shifts abruptly from statistical evidence to descriptive imagery. "Imagine walking into your grotty house" feels disconnected from your point about population numbers.

Exemplar: "With 7 billion rats worldwide compared to 8 billion humans, we must prioritise human wellbeing. These rats, which damage our homes and destroy our food supplies, pose a significant threat to human welfare."

### #3 (Final paragraph): Strengths:

- Attempts to provide a balanced conclusion
- Links back to real-world applications

Weaknesses: Development of Ideas → Your conclusion introduces new information about animals not being harmed, which contradicts the tension built throughout your essay about necessary sacrifice.

Exemplar: "In conclusion, while we must remain mindful of animal welfare, controlled testing under strict ethical guidelines represents a necessary compromise to advance human medicine and save countless lives."

Actionable Task: Rewrite your opening paragraph to align with your pro-testing stance by describing the positive medical breakthroughs achieved through animal testing rather than its negative consequences.

Section 2:

**#1 Envision weeping, unconscious children, lying in stained scarlet hospital beds. Stressed surgeons rushing from door to door, helping the patients most in need. In the farthest door, you can hear morbid screams coming from parents and children, who are both in excruciating pain. All the walls and doors are alabaster white, except for the slight splash of blood on them. Seeping out of the door beside you, is deep red blood. This is the dreadful result of animal testing being deemed not ethical.**

~~Currently,~~ [At present,] most countries in our world test newly found medications on animals such as rats and rabbits. The reason why these animals are tested on is because they are pests. Imagine how significantly our population would drop if we tested our discoveries on humans? ~~A lot of~~ [Many] failed discoveries will result in lots of deaths. This is why testing on animals is ethical.

**#2** Firstly, it is crucial that animal testing is ethical because our lives matter more. According to the World Atlas, there are 7 billion rats worldwide, and there are 8 billion people. Our lives matter more than rats because they are pests to everyone. They eat your pets food and crops, and breed and overpopulate your house. ~~Imagine walking into your grotty house, and rats are scurrying beside you.~~ [Picture entering your filthy house with rats scurrying alongside you.] The rancid smell hurts your nose. It travels up, poisoning everything. Leaving behind a horrible scent.

~~Finally,~~ [Furthermore,] it is imperative that animal testing should be considered ethical because animals are only used in the most harsh circumstances. Before the animals become tested, scientists do a lot of other research to ensure that the medication is safe. If they cannot figure it out, then they have to test it on the animals.

Some people may think that animals have feelings and they can't give you permission to test them, and animals show body signs when they're facing death. But in most of these circumstances, animals very rarely die.

**#3** In conclusion, testing on animals is ethical because our lives matter more than animals lives, and that animals are tested in the worst circumstances. ~~So next~~ [So next] time you see a product

that says 'Tested on animals', be grateful that you aren't being tested on and that animals aren't even being harmed.
