

## Section 1:

### #1: First paragraph Strengths:

- Strong opening with a thought-provoking rhetorical question that engages readers
- Clear thesis statement presenting three main arguments

Weakness: Underdeveloped Time Travel Hook → Your time travel premise ("I am here from the 2060s") is introduced but not fully utilised to strengthen your argument. This unique angle could have been woven throughout to create a more compelling narrative.

Exemplar: "As a visitor from 2060, I've witnessed firsthand how our present recycling choices have transformed our future. Let me share three crucial reasons why your recycling habits today will shape the world I live in."

### #2: Second paragraph Strengths:

- Clear link between recycling and planetary health
- Good attempt at explaining the importance of oxygen

Weakness: Circular Reasoning → Your argument connects recycling to planetary health, but your reasoning becomes circular when you state "Keeping a planet healthy means that you are protecting the planet." You need to establish clearer cause-and-effect relationships.

Exemplar: "Recycling directly contributes to planetary health by preserving natural resources and reducing the need for landfills, which in turn protects vital green spaces and the trees that produce our oxygen."

### #3: Fourth paragraph Strengths:

- Concrete example with specific cost reference
- Good attempt at addressing economic benefits

Weakness: Incomplete Economic Analysis → Your discussion about saving money focuses mainly on packaging costs but misses the broader economic benefits. The phrase "waste over ten thousand dollars" needs more context and supporting details.

Exemplar: "The economic impact of recycling extends beyond just packaging costs. When manufacturers reuse materials, they save on raw material extraction, processing, and transportation costs, which ultimately reduces consumer prices."

Actionable Task: Rewrite your opening paragraph by developing a stronger narrative from your future perspective - describe specific environmental changes you've witnessed in 2060 that could be prevented through present-day recycling efforts.

---

**Overall Score: 40/50**

Section 2:

### #1 A Lesson on Recycling

How would you feel if your future generations couldn't have a normal life with rubbish lying around? I am here from the 2060s to teach you about why you should recycle. ~~I strongly believe that you should recycle because you will create a healthier planet, reduce pollution and save money.~~ [I strongly believe that you should recycle because you will create a healthier planet, reduce pollution, and save money.]

~~#2 First and foremost, you should recycle as you will keep the planet healthy. Keeping a planet healthy means that you are protecting the planet by having nature everywhere.~~ [First and foremost, recycling plays a crucial role in maintaining our planet's health by protecting natural environments and preserving ecosystems.] This is important as nature is trees and plants which is oxygen. ~~Without oxygen, we wouldn't even be living.~~ [Without oxygen produced by these plants and trees, life on Earth would be impossible.] Thus, you should recycle as you will keep the planet healthy.

Furthermore, you should recycle as it will reduce pollution. ~~Pollution can be the emissions from fossil fuel powered cars or just from power plants.~~ [Pollution comes from various sources, including emissions from fossil fuel-powered cars and power plants.] Either way, they are still polluting the air. To reduce the pollution, you can recycle so microscopic pieces do not get into the ocean. Therefore, you should recycle as it reduces pollution.

~~#3 Last but not least, recycling saves money. The packaging for food or other things costs a lot to not only make but to get.~~ [Last but not least, recycling saves money. The packaging for food and other items is expensive not only to produce but also to source.] To get just the machinery to get the material for the packaging, you have to waste over ten thousand dollars. Creating the packaging is even more expensive. Instead of digging up the world for materials, why can't people just reuse the packaging. ~~Thus~~ [Therefore,] you should recycle as you will save money.

To conclude, you should recycle as it keeps the planet healthy, reduces pollution and it saves money. It's now your responsibility to be environmentally friendly and preserve your own ecosystem. Now what are you waiting for? Get up and start recycling your rubbish!
