

Section 1:

#1 "UBI can stimulate economic growth by increasing consumer spending... reducing administrative costs and fraud." Strengths:

- Strong integration of specific economic data to support claims
- Clear logical flow from economic growth to administrative efficiency

Weaknesses: Complex Causation Clarity → Your economic argument would benefit from more explicit connection between UBI and growth mechanisms. The link between "increasing consumer spending" and the Roosevelt Institute's projection needs stronger bridging. Consider clarifying how exactly this spending translates to growth.

Exemplar: "UBI stimulates economic growth through increased consumer spending, as recipients inject funds directly into local economies. The Roosevelt Institute's study demonstrates this multiplier effect, projecting that..."

#2 "Implementing UBI would reduce poverty... reducing income disparities." Strengths:

- Effective use of concrete evidence with the Namibia case study
- Strong connection between multiple benefits (poverty, education, healthcare)

Weaknesses: Evidence Integration → Your Namibia example, while compelling, stands somewhat isolated. You've presented the statistics but haven't fully woven them into your broader argument about universal implementation.

Exemplar: "The Namibia pilot programme demonstrates UBI's transformative potential: as poverty rates fell from 76% to 37%, communities experienced cascading benefits across education and healthcare, illustrating how financial security catalyses widespread social improvement."

#3 "A UBI recognizes the inherent dignity... abundant with resources." Strengths:

- Compelling ethical framework presented
- Clear connection between dignity and practical outcomes

Weaknesses: Abstract Argumentation → Your ethical argument would benefit from more concrete illustration. The concept of dignity remains somewhat theoretical without specific examples of how UBI practically enables personal growth.

Exemplar: "UBI honours human dignity by ensuring that everyone, whether a single parent pursuing education or an artist developing their craft, has the foundational security to pursue meaningful personal growth."

Actionable Task: Revise your second paragraph by creating explicit connections between the economic data and real-world implications - take each statistic and explain specifically how it translates to tangible benefits for individuals and communities.

Overall Score: 41/50

Section 2:

Universal Basic Income (UBI), a policy where all citizens receive a regular, unconditional payment, should be implemented nationwide. UBI offers a transformative solution to economic inequality, technological unemployment, and social safety net inefficiencies, while aligning with moral principles of fairness and human dignity.

#1 UBI can stimulate economic growth by increasing consumer spending. In 2017, a study by the Roosevelt Institute estimated that a \$1,000 monthly UBI could grow the U.S. economy by 12.6% over eight years, adding \$2.5 trillion annually. UBI also simplifies welfare systems, reducing administrative costs and fraud. Additionally, as automation displaces jobs, UBI provides a safety net, preventing widespread financial insecurity.

~~#2 Implementing UBI would reduce poverty and improve health and education outcomes.~~ [The implementation of UBI would lead to reduced poverty whilst improving health and education outcomes.] A 2011 study in Namibia, where a UBI pilot was conducted, showed poverty rates dropping from 76% to 37%, alongside improvements in school attendance and healthcare access. UBI empowers individuals to pursue education, entrepreneurship, or caregiving without the fear of financial ruin. ~~It promotes social equity by ensuring everyone has a minimum level of economic security, reducing income disparities.~~ [By ensuring everyone maintains a minimum level of economic security, it promotes social equity and reduces income disparities.]

#3 A UBI ~~recognizes~~ [recognises] the inherent dignity of every person. By providing financial stability, it enables individuals to focus on personal growth, community involvement, and well-being. It aligns with the principle that no one should live in poverty in a society abundant with resources.

In conclusion, UBI is not a utopian fantasy but a pragmatic response to modern economic and social challenges. By addressing poverty, inequality, and automation-driven unemployment, UBI fosters a more resilient and inclusive society. It is a moral, economic, and social imperative that reflects the values of fairness and shared prosperity. Implementing UBI nationwide would be a bold step toward a more equitable future.
