

Section 1:

#1: Community Improvement Response a. Strengths:

- Shows consideration for both global and local issues
- Demonstrates awareness of current social challenges

b. Issue: Lack of specific details → Your response mentions donating "half of the money" but doesn't specify amounts or concrete plans. Phrases like "issues in my community" and "other issues" need more detail.

c. Exemplar: ***I would allocate £5 million to establish three homeless shelters in the city centre, focusing on providing both emergency accommodation and long-term housing support.***

#2: Conflict Resolution Response a. Strengths:

- Includes a relevant personal example
- Shows understanding of negotiation skills

b. Issue: Underdeveloped argument structure → Your response begins with a quote but doesn't fully connect it to your conflict resolution approach. The phrase "After a while, they demanded my thoughts" leaves gaps in the story's progression.

c. Exemplar: ***When my group members initially disagreed with my ideas, I suggested we create a shared document where we could list each person's suggestions and systematically evaluate their benefits.***

#3: Teaching Subject Response a. Strengths:

- Shows passion for the chosen subject
- Includes innovative ideas

b. Issue: Limited teaching methodology → Your response focuses on what you would teach but doesn't explain how you would teach it. The saltwater car idea needs more context within a teaching framework.

c. Exemplar: ***I would engage students through hands-on sustainable design projects, starting with simple recycling challenges and progressing to more complex environmental solutions.***

■ Your answers would benefit from more concrete examples and detailed implementation plans. When discussing community improvement, try breaking down the budget into specific projects.

For conflict resolution, outline the steps you took more clearly. In the teaching response, include specific lesson activities and student engagement strategies.

**Actionable Task:** Rewrite your community improvement answer by creating a budget breakdown for at least three specific projects, including estimated costs and implementation timeline.

Section 2:

#1 If I was given a large sum of money to improve my community, I would help donate the half of the money towards issues in my community that are not only concerning my community but the United Nations, on a larger scale. ~~Hopefully, this will be~~ [This could be] a step closer to ending poverty, along with other issues such as education and sanitation. With the other half of the money, I would build homeless shelters and elderly centres, free for all to enter, for those who lack the Universal Basic Income and face the cost of living crisis. ~~This way, they will be able to fit in to the society and get some shelter~~ [This initiative would provide essential support and help integrate vulnerable individuals into society].

#2 I strongly believe that an argument is pointless, yet unavoidable. "You can never win an argument. Even if you do, the other person is always going to think their way." This quote was from one of Dale Carnegie's books, and I certainly agree. But, ~~in the unavoidable times~~ [when conflicts arise], I would try to negotiate. For example, when I was working on a project a while ago, ~~the other members of the group decided to be bossy and have everything their way~~ [my group members had strong opinions about the direction of the project]. After a while, they demanded my thoughts. I used my negotiating skills to identify the problem, listed possible solutions, and identified pros and cons. We decided we would join our ideas together to create a better one, considering the pros of each idea.

#3 If I had the opportunity to teach a subject, I'd teach Sustainable Designing. Being sustainable is extremely important in today's world, and I express an interest in the subject. I've always been fascinated by this subject, because I would like to contribute to a greener society. Teaching the younger generation to make a greener society is also important. ~~I've got an idea~~ [I have developed a concept] to make a car run on saltwater, which is better than an electric vehicle because it uses salt to create the 'batteries' that don't pollute the environment, contrary to the batteries an electric vehicle would use.
