

Section 1:

#1 (Introduction paragraph): Strengths:

- Your opening with "Imagine" creates an engaging hook that draws readers in
- Your use of descriptive language ("delicate piece of paper") paints a vivid picture

Weaknesses: Limited development of ideas → Your introduction briefly mentions paper recycling but misses the opportunity to outline the broader scope of recycling. The phrase "simple step to put pieces of paper" narrows the focus too much when recycling encompasses many materials.

Exemplar: *Imagine witnessing the transformation of our waste - from crumpled newspapers to fresh writing paper, from empty bottles to new containers, from tin cans to useful materials. This is the magic of recycling, a powerful step we can all take to protect our precious planet.*

#2 (Reason 1 paragraph): Strengths:

- Your emotional appeal about marine life creates a strong connection
- Your use of rhetorical questions engages the reader effectively

Weaknesses: Run-on sentences and unclear structure → Your sentence "Recycling. An act of helping our mother nature..." is too long and combines multiple ideas without clear organisation. The phrase "rubbish pilling up" needs better structure to convey your message clearly.

Exemplar: *Recycling is our way of helping Mother Nature. When we carelessly dispose of our rubbish, it ends up on reef shores, harming innocent marine life. Each plastic straw wrapper we throw away could be the one that ends a sea creature's life.*

#3 (Conclusion paragraph): Strengths:

- Your call to action encourages immediate response
- Your metaphor about weaving threads creates a memorable ending

Weaknesses: Lack of specific actions → Your conclusion uses general phrases like "add up to the change" without providing concrete steps. You need to tell readers exactly what they can do to become "recycling champions."

Exemplar: *Start your recycling journey today by setting up separate bins at home, spreading awareness in your community, and making conscious choices about what you buy. Together, we can weave a greener future for generations to come.*

■ Your writing shows passion for recycling, but needs more specific examples and practical solutions. Try expanding each reason with real-life examples that readers can relate to. Break down longer sentences into shorter, clearer ones to help your message shine through. Your paragraphs could be longer with more detailed explanations of how recycling helps our planet.

Actionable task: Rewrite your first reason paragraph focusing specifically on marine pollution - include statistics about plastic waste in oceans and describe specific examples of how recycling reduces marine pollution.

Score: 40/50

Section 2:

The importance of recycling: ~~Lets~~ [Let's] save our planet together

The excitement of writing (INTRODUCTION) #1 Imagine. Seeing a piece of newspaper article that has been all crumpled and stepped over multiple times, transform into a delicate piece of paper that you're now writing on. This describes recycling. ~~The Real~~ [The real] beauty in such a simple step to put pieces of paper in special recycling bins. And by this simple act, we can strive in the journey of saving our planet.

How recycling benefits our planet (REASON 1) #2 Recycling. ~~An act of helping our mother nature that holds us all up as a part of generosity, a helping hand to our planet acts as an ultimate medicine to the circumstances of this rubbish piling up on the reef shores for the resplendent marine life to digest and die.~~ [Recycling is an act of helping our Mother Nature, which holds us all up. Like medicine for our planet, it prevents rubbish from piling up on reef shores where resplendent marine life might digest it and die.] Why wouldn't we want to help our globe that holds us all to its core, provides us with food to ~~keeps~~ [keep] us alive and then we repay them with rubbish? How would you feel if this were to happen to you in the faith of great suffering? Furthermore, the life of several innocent marine ~~life~~ [creatures] lies in our hands to protect them from this as they die each year because of choking over our left-over wrappings of the drink straw we probably used today morning.

Recycling at home and school (REASON 2) School, a type of home in some way or the other to us all is where we mostly spend our time at []. Having recycling bins allocated for special paper to go in there showing how much we care and because of this many students will continue following the saying and the crowd of when in Rome do what the ~~romans~~ [Romans] do. This means none the less of what we are supposed to do. So, ~~lets~~ [let's] add to the change at both at home and school to act to a better future and push this saying forward by breaking the impossible

to be the possible and get rid ~~and~~ [] of rubbish on the street while we don't throw anymore and allocate special bins.

Let's all join the recycling movement (~~Reason 3~~) Recycling rangers from helping our planet to helping not only us but our community. Imagine our community, allocating some time to go over our suburb where we all pick up our desired amount of rubbish for a week and educate young minds in the process. This can make a huge difference as young students can have the chance to learn about such a topic at [an] early age. When we do this act, we not only Recycle but reduce and reuse as well. We still have time to influence everyone on the greener side and make a change. And only you are enough to change the world. So, let's make a change.

Become a recycling champion (~~CONCLUSION~~) #3 What's the wait for? Let's all add up to the change. As we all know recycling weaves the intricate threads of the fabric of our society in building a safer and healthier community that not only benefits us but our surroundings. So, ~~lets~~ [let's] embark on the future and hope for a greener future ahead to the next upcoming generations.
