

Section 1:

#1 First paragraph: Strengths:

- Clear thesis statement introducing the main argument
- Strong opening that captures attention

Weaknesses: Limited supporting evidence → Your opening relies heavily on dismissing opposing views without providing concrete evidence. The phrase "anyone who says otherwise is wrong" comes across as overly defensive rather than persuasive.

Exemplar: *White paper offers distinct advantages for writing, drawing, and printing, making it the optimal choice for most applications. Its versatility and practical benefits make it stand out among other paper varieties.*

#2 Second paragraph: Strengths:

- Good use of specific examples
- Clear topic sentence

Weaknesses: Repetitive reasoning → Your paragraph repeats the same point about readability without developing the argument further. The phrase "Anyone who says colored paper is better for reading doesn't understand" could be replaced with specific examples of why white paper enhances readability.

Exemplar: *The stark contrast between dark ink and white paper creates optimal reading conditions, particularly in educational materials where clarity is paramount.*

#3 Fourth paragraph: Strengths:

- Creative angle on versatility
- Good use of examples

Weaknesses: Underdeveloped ideas → Your discussion of versatility lists uses but doesn't explore how white paper's properties enable these uses. The phrase "you can do whatever you want" needs more specific supporting details.

Exemplar: *White paper's neutral surface makes it ideal for various applications, from detailed technical drawings to vibrant artistic expressions, as it provides a clean canvas that doesn't interfere with any medium.*

→ Your writing would benefit from more balanced arguments that acknowledge potential merits of alternatives whilst emphasising white paper's advantages. The current approach of dismissing

opposing views weakens your argument. Consider including specific examples and data to support your claims about white paper's superiority.

Actionable task: Rewrite your first paragraph, focusing on providing two specific examples with numerical data (such as contrast ratios or cost comparisons) that demonstrate white paper's advantages.

Score: 40/50

Section 2:

Why White Paper is the Best Choice

~~#1 White paper is the best choice for writing, drawing, and printing, and anyone who says otherwise is wrong. While some people may think that colored or fancy paper is better, they don't understand the many reasons why white paper is superior.~~ [White paper stands as the premier choice for writing, drawing, and printing, offering numerous advantages over alternatives. Whilst some might prefer coloured or fancy paper, the benefits of white paper make it particularly suitable for most applications.] White paper is clear, affordable, and works for almost anything you need it for. It has so many benefits that no other type of paper can beat it.

~~#2 First, white paper is the easiest to read. The bright, clean surface makes words and pictures stand out clearly. Colored [Coloured] paper can be hard to read because the words might blend in or be hard to see. When you use white paper, the writing shows up dark and sharp, which makes it perfect for schoolwork, books, and important papers. Anyone who says colored paper is better for reading doesn't understand how hard it can be to see words clearly on anything other than white paper.~~ [The superior contrast provided by white paper ensures optimal readability across various lighting conditions and printing methods.]

Another reason white paper is the best is because it's cheap. It costs less than ~~colored~~ [coloured] or fancy paper because it's made in large amounts, which means it's easy to get and doesn't cost a lot of money. This makes it perfect for students, families, and schools where a lot of paper is needed. When you need to print out homework, make crafts, or draw, white paper is affordable and easy to find. Those who argue that fancy paper is better just don't realize how much money can be saved by using white paper instead.

~~#3~~ White paper is also the most versatile. You can use it for anything—writing notes, printing projects, drawing pictures, making posters, and more. ~~Colored~~ [Coloured] paper only works for certain things and might not be suitable for all your projects. With white paper, you can do

whatever you want, and it works with all kinds of pens, markers, and paints. ~~People who say colored paper is more creative don't understand that white paper can be just as creative when you use bright colors on it.~~ [White paper provides an ideal foundation for creativity, allowing for unlimited colour combinations and artistic expressions.]

Lastly, white paper has special meaning. A blank white sheet is like a fresh start, where anything can happen. It inspires new ideas, whether you're writing a story or drawing a picture. Many great books, art, and inventions started on a white page. ~~Colored~~ [Coloured] paper can't inspire the same kind of creativity and focus that white paper can.

In conclusion, white paper is the best choice for writing, drawing, and printing. It's easy to read, cheap, versatile, and inspiring. Anyone who says that ~~colored~~ [coloured] paper is better is simply not looking at all the reasons why white paper is the smartest choice.
