

## Section 1:

#1 "White and Black paper should be produced more than coloured paper, if not it should be replaced with. This is because coloured paper is often hard to produce and requires more energy, more time and more resources which destroy the beautiful ecosystem around us"

### Strengths:

- Clear environmental stance with specific impacts mentioned
- Strong opening that establishes your main argument

Weaknesses: Incomplete sentence structure → Your opening statement ends abruptly with "replaced with." Several ideas are merged without proper punctuation, making it challenging to follow your reasoning.

Exemplar: "White and black paper should be produced more than coloured paper, or the latter should be phased out entirely. Coloured paper production demands excessive energy, time and resources, leading to significant damage to our ecosystem."

#2 "If we had rainbow paper, a dream all kids have but is it really versatile? Do you think it is easy to write on orange or yellow coloured paper? Imagine you're are trying to draw a picture of a sunflower you can barely see the petals!"

### Strengths:

- Effective use of rhetorical questions to engage readers
- Creative example with the sunflower drawing

Weaknesses: Inconsistent tone → Your writing shifts between formal argumentation and casual conversation, which affects the persuasive impact. The multiple questions in succession dilute your main point.

Exemplar: "While rainbow paper may appeal to children's imagination, its practical limitations are significant. Writing on yellow or orange paper proves challenging, as demonstrated when attempting to draw something as simple as a sunflower – the petals become nearly invisible."

#3 "Mr Ben, a researcher in the art department stated that using coloured paper can strain your eyes more than using black paper. He has proven that by giving a survey to kids of ages 6-10 and adults (artists) aged 20-60."

### Strengths:

- Inclusion of expert testimony

- Specific age ranges provided for research credibility

Weaknesses: Citation development → Your reference to Mr Ben's research lacks sufficient detail and connection to your main argument. The survey results are mentioned but not elaborated upon.

Exemplar: "According to Mr Ben's comprehensive research in the art department, eye strain occurs significantly more frequently with coloured paper usage compared to black paper. His survey, encompassing both young students (ages 6-10) and professional artists (ages 20-60), definitively demonstrated this health concern."

Actionable Task: Rewrite your third paragraph focusing on developing Mr Ben's research findings - include specific survey results and connect them explicitly to your argument about black paper's superiority.

Section 2:

#1 ~~White and Black paper should be produced more than coloured paper, if not it should be replaced with.~~ [White and black paper should be produced more than coloured paper, or the latter should be replaced entirely.] This is because coloured paper is often hard to produce and requires more energy, more time and more resources which destroy the beautiful ecosystem around us

#2 Black paper should be produced more than coloured paper as it is cheaper, more formal and easier to use. ~~Coloured paper. A general A4 paper is thought of white but it should change into black.~~ [While A4 paper is traditionally white, black should become the new standard.] If we had rainbow paper, a dream all kids have but is it really versatile? Do you think it is easy to write on orange or yellow coloured paper? Imagine ~~you're are~~ [you are] trying to draw a picture of a sunflower you can barely see the petals! If you use black or white paper it is more formal and easy to see colours on. Having black paper means that colours like yellow and white really get to have their chance. Traditional white A4 ~~can't~~ [cannot] portray the beautiful aspect of pure yellow and white. Meanwhile black paper ~~make~~ [makes] all the bright and light ~~colour~~ [colours] pop out and make the drawing more vivid and have more meaning.

#3 Adding on, coloured paper is much more expensive to produce and create than black and white paper. ~~Mr Ben, a researcher in the art department stated that using coloured paper can strain your eyes more than using black paper.~~ [Mr Ben, a researcher in the art department, stated that using coloured paper causes more eye strain than using black paper.] He has proven that by giving a

survey to kids of ages 6-10 and adults (artists) aged 20-60. It has not come to a shock that coloured paper is by far the most ~~hardest~~ [difficult] paper to produce and use.

Concluding, coloured paper should be banned as it requires more energy, more time and more resources. Coloured paper strains the bare eye and one thing a typical white A4 ~~can't~~ [cannot] do is portray the bright colours a black paper can.
