

Do you want a stinky, dirty and rotten Planet Earth? Then clean up now! And Reuse, Refuse and Recycle. Say no to pollution to ^{prevent climate} prevent climate change and ^{extinction} extinction!

Reuse, Refuse, Recycle.

There are ^{many} many ways to Reuse, Refuse and recycle beginning with Reuse for example you could use an old egg carton to plant a bunch of little plants. Refuse is as easy as saying no to plastic or bring your own reusable ^{container} container from home such as a ^{freezer} freezer bag ^{instead} instead of a plastic one. Recycling may just be ^{around} around the ^{corner} corner if you live in ^{Melbourne} Melbourne. All you got to do is go to your

local 10¢ refund box and ^{boxes} boxes ^{your} your recycling

cans and plastic ^{bottles} bottles for money! so

Reuse, Refuse and Recycle and save

the planet for there is no planet B,

climate change

Climate change

What is climate change? Climate change

is when the earth goes below or above regular temperature. How does this happen?

the top ^{one reason} 1 ~~reason~~ why global warming happens

is human litter and construction

^{which release} which releases gasses and dust into

the air. The ^{second} number 2 most ^{common} common

reason of global warming is surprisingly

cows as they release a ^{deadly} deadly

^{gasses} type of gass to us humans called

methane. The methane enters their

strong digestive ^{systems} systems by the
grass they ^{eat} eat at. We can help by giving
them hay instead.

Now you heard it's time to ^{clean} clean
up. And here is a ^{disgusting} disgusting fact,
if you don't ^{clean} clean up now
Did you know that in the future
you will end up eating the
same ^{amount} amount of plastic as a
credit card? So reuse, refuse, and
recycle!
