

1.

If I had a large sum of money, I would build a community garden free and accessible to all, as this would produce large amounts of food to be divided equally to everyone, without any cost, therefore providing healthy nutrition and cutting down living expenses. This would also teach children the lifelong skill of farming, essential for holistic growth and excellence. I would also build more community housing, as inflation makes houses unaffordable for the poor, and these people need somewhere to live. Thirdly I would build a community library, to provide academic brilliance, giving children education and life skills. The library would make the next generation to become successful from their education, lessening the number of the poor. Throughout this I will be able to decrease the number of people in poverty, and support those who are.

2.

To resolve conflict my first step would be to respect the other person's perspective, and try to understand their reasoning. Through this, I can find a middle ground in which both of us are happy. For example, once my friend and I disagreed about who would do the research in our group, and understanding his perspective and reasoning, I told him that he could do the research because I would be better at writing the story. Using this technique I found a trade-off that would benefit both of us, and most importantly benefited the outcome.

3.

If I were to teach one subject in a day, I would easily pick nutrition. In today's world, many people are impacted with various lifestyle diseases such as diabetes, high blood pressure, hormonal imbalance and weak immune system. Teaching this subject wouldn't just make everyone healthy, but also have everyone understand how to eat based on your nutrition needs. Nutrition is what makes up the structure of the human body, and is essential for health. It is something almost constantly overlooked. To stop this, children need to know the importance of nutrition, and its life saving benefits.
