

Section 1:

#1 (First paragraph): Strengths:

- Strong opening statement establishing paper's global significance
- Effective use of examples to illustrate paper's versatility

Weaknesses: Structure and Flow → Your opening paragraph contains abrupt transitions between ideas, particularly when introducing the debate topic. The shift from "the possibilities are endless" to "However, there was a debate" feels sudden and disconnected from the previous points.

Exemplar: "Paper is one of the most highly-demanded objects worldwide, serving countless purposes from artistic expression to professional documentation. While paper comes in various colours, offering endless possibilities for different applications, an important question arises: which colour truly stands superior?"

#2 (Third paragraph): Strengths:

- Clear topic focus on readability
- Effective use of rhetorical question to engage readers

Weaknesses: Development of Ideas → Your paragraph introduces multiple important points about white paper's benefits but doesn't fully explore them. For instance, you mention "eye fatigue" but don't elaborate on how white paper specifically helps prevent this issue compared to other colours.

Exemplar: "Writing on dark-coloured paper significantly compromises legibility, particularly with standard writing tools like pencils. White paper, in contrast, provides optimal contrast for text, reducing eye strain through its superior light-reflecting properties. This enhanced readability proves especially crucial in academic environments, where students engage with text for extended periods."

#3 (Fifth paragraph): Strengths:

- Strong economic argument
- Well-structured explanation of cost benefits

Weaknesses: Supporting Evidence → Your discussion about white paper's cost-effectiveness could benefit from more specific details. The statement "white paper is the most commonly produced" needs more context to strengthen your argument.

Exemplar: "As the industry standard, white paper's mass production leads to significantly lower manufacturing costs. This economic advantage translates directly to consumers and businesses,

making it not only the most practical choice but also the most financially accessible option in the market."

Actionable Task: Revise your third paragraph focusing specifically on the scientific aspects of white paper's readability - explain precisely how the light reflection properties affect eye strain and reading comprehension.

Score: 41/50

Section 2:

~~#1 Paper is one of the most highly-demanded objects in the whole world. Whether it is used for drawing, wrapping things, or for work, paper is one of the most useful things that have been invented. Paper can be dyed, to make different colours of paper. Whether it is white, black, red, or orange, the possibilities are endless. However, there was a debate — a debate about which colour of paper is the best out of all of the colours. [Paper is one of the most highly-demanded objects in the world, serving essential purposes from drawing and wrapping to professional work. Its versatility extends to various colours through dyeing processes, including white, black, red, and orange, offering endless possibilities. This diversity has sparked an important debate: which paper colour stands supreme among all options?]~~

That colour is... white. White paper is the best colour of paper. Its readability, versatility, and cost make it that useful.

#2 Do you think writing on a black piece of paper with a pencil is good? Well, no. It would be so hard to read! ~~You see,~~ [Indeed,] white paper is much easier to read than any other paper colours, as the colour of the writing stands out more than the other colours. Moreover, white reflects light in a way that reduces eye fatigue during long reading or writing sessions. This is particularly important for educational settings, where students may need to read lengthy textbooks or complete assignments. The high contrast between text and paper also helps readers maintain focus, as there are fewer distractions and visual interruptions. It is great to be able to read on a piece of paper.

When it comes to versatility, white paper is superior to any other colour. It can be used for a wide range of applications, from writing and printing to crafting and packaging. The neutrality of white allows it to accommodate any form of ink, paint, or graphics. Whether you're working on formal documents, business presentations, artistic projects, or school assignments, white paper is an ideal choice to ensure your work looks clean and polished.

#3 White paper is the most commonly produced and used type of paper, which means it is often the least expensive option available. Manufacturers produce white paper in bulk, making it readily available and more affordable than coloured paper. Additionally, because white paper is so common, printers and other equipment ~~are optimized~~ [are optimised] to handle it efficiently, which can further reduce operational costs. This lower cost makes white paper accessible to individuals and businesses of all sizes, reducing the expenses and ensuring a budget-friendly solution for everyday use.

White is an excellent paper colour. Whether it's for readability, or just to reduce the costs, white paper is the best paper colour.
