

Section 1:

#1: "Hello everyone. I hope you can understand me as the last time I checked the language in the 1980's it was English. Now, I am not here to give you a lecture on recycling, but am to show you what it will do to the planet you call home."

Strengths:

- Your opening creates an engaging, conversational tone that draws readers in
- Your clear statement of purpose helps establish the speech's direction

Weaknesses: Ineffective Hook → Your opening relies on dated humour that detracts from the serious nature of your topic. The reference to "1980's" and checking the language feels disconnected from your environmental message.

Exemplar: "Our planet stands at a crossroads, and today I'm here to show you how your actions will shape its future - the place we all call home."

#2: "This situation wasn't science fiction. It was reality. Earth became unable to succumb to any form of life and we had to migrate."

Strengths:

- Your use of short, impactful sentences creates dramatic emphasis
- Your transition from narrative to reality effectively reinforces your message

Weaknesses: Logical Inconsistency → Your narrative jumps from describing a future scenario to claiming it as present reality. The phrase "Earth became unable to succumb to any form of life" contradicts the fact that you're describing a potential future.

Exemplar: "This isn't merely science fiction - it's the reality we're hurtling towards unless we act now. Our Earth is showing signs of becoming increasingly hostile to life."

#3: "Now you see this man, he is strolling through the streets and sees a piece of rubbish. What should he do? Pick it up or leave it."

Strengths:

- Your interactive approach engages the audience directly
- Your use of a concrete example makes the message relatable

Weaknesses: Underdeveloped Scenario → Your example lacks context and emotional weight. The simple binary choice doesn't fully illustrate the complexity of environmental responsibility.

Exemplar: "Imagine you're walking down your street and spot a plastic bottle in the gutter. That single piece of rubbish represents a choice - a choice that, multiplied by billions of people, shapes our planet's future."

Actionable Task: Rewrite your opening paragraph focusing on creating a stronger emotional connection with your audience. Replace the dated language reference with a compelling fact or scenario about environmental change that directly affects your listeners' lives.

Score: 43/50

Section 2:

~~Hello everyone. I hope you can understand me as the last time I checked the language in the 1980's it was English.~~ [Good morning, everyone. While the language we speak today remains English, the urgent message I bring transcends mere words.] #1 Now, I am not here to give you a lecture on recycling, but am to show you what it will do to the planet you call home.

Imagine, if you will, a world where the air is so thick with pollution that it's difficult to breathe, where forests have been cleared to make way for sprawling cities, and where the oceans have become dumping grounds for plastic and chemicals. In this world there was a boy named Bob. He was a teenager around your age and he immersed himself into topics like environmental conservation and how to address global warming. ~~You know though he was unsuccessful with his ambition, he aided families to safety and earned trillions of dollars.~~ [Despite facing challenges in his environmental mission, he managed to help families find safety whilst amassing considerable wealth.] ~~This situation wasn't science fiction. It was reality. Earth became unable to succumb to any form of life and we had to migrate.~~ [This situation isn't mere science fiction - it's the path we're currently treading. Our Earth is gradually becoming inhospitable to life, forcing us to consider the unthinkable: migration.] #2 I am giving you a chance to be another Bob.

It's not that hard to be honest. But before I blabber on about how to save our world, I am going to show you the impact it has brought upon us. We experienced several natural disasters ,unpredictable storms, devastating floods, heatwaves, and droughts. Even with new technological advancements, each moment we are petrified on the next natural disaster. Your adorable pets have faced extinction and there is no ecosystem any more.

This will be the life your children, grandchildren or even yourself might be experiencing. Don't get me wrong, but the speeches where the speaker lists out a way on how to stop climate change is cringe, so I will be running this differently. I am going to show you the results. " The speaker points to a hologram on the board."~~Now you see this man, he is strolling through the streets and~~

~~sees a piece of rubbish. What should he do? Pick it up or leave it."~~ [Before you stands a hologram of a person walking down a street, confronted by a piece of litter. What choice should they make - ignore it or take responsibility?] #3 The students neglected the fact and chose to leave it." Watch what happens." The hologram transformed the surrounding, The world became coated with visible pollutants and there was eternal darkness. The students were ~~mesmerized~~ [mesmerised].

" Now I am not asking you to reluctantly pick up someone else's litter and recycle it. I am asking you to spread awareness globally. I am the messenger, you are the changers of the world.

Now, I ask you: Will you be the one who looks back in regret, knowing you could have acted but chose not to? Or will you be the ones who inspire future generations to live in harmony with the Earth, who fought for a world where climate change was no longer a crisis, but a lesson learned?

You are the trailblazers of tomorrow. The future's not written in books, it is weaved through the actions that we make today. So take action now. Recycle, spread awareness, and become the saviors our planet so desperately needs. The Earth is waiting for your leadership.

Thank you."
