

Section 1:

#1 "On the 23rd of November, while kids were getting their daily brain blast, the government decided it was time for a change. The government spent all afternoon designing an incredibly advanced technology masterpiece that can control minds in an certain area."

Strengths: Your opening immediately creates intrigue with the mysterious "brain blast" reference. You establish a clear conflict between citizens and a controlling government.

Weakness: Setting development → Your setting lacks specific details that would ground the reader in time and place. The phrase "daily brain blast" is unclear and the government designing complex technology "all afternoon" seems unrealistic.

Exemplar: *On the 23rd of November, in the small community of Oakvale, children were watching their daily educational programme "Brain Blast" when the secret government laboratory completed their most dangerous project yet – a device capable of controlling minds within a five-kilometre radius.*

#2 "He sneaked into it like a ninja and no one saw him as it was empty. Raymond dashed through the investigation room and rushed into the planning room which had all the things the mad scientist had done for the government."

Strengths: You've created tension with Raymond sneaking into the laboratory. The discovery of the planning room effectively advances the plot.

Weakness: Action sequence pacing → The sentences rush through important moments without giving readers time to visualise the scene. Words like "dashed" and "rushed" make the action feel hurried rather than suspenseful.

Exemplar: *With careful, silent movements, Raymond slipped past the security cameras and into the deserted laboratory. His heart pounded as he crept through the investigation room, pausing at each doorway to listen for guards, before finally discovering the planning room filled with the mad scientist's disturbing government projects.*

#3 "Although everything went back to normal, the mad scientist is planning something unstoppable in the shadows. Something inevitable and dangerous"

Strengths: Your ending effectively creates a cliffhanger that suggests a sequel. The short final sentence adds dramatic impact.

Weakness: Conclusion development → The ending feels abrupt and doesn't fully resolve the story's themes about government control. The mad scientist remains a vague threat without specific motivations or plans.

Exemplar: *Though Raymond had restored the community's free will and helped elect a new government, deep within an underground bunker, the mad scientist hunched over glowing blueprints for a new device—one that would control not just minds, but memories themselves. "Next time," he whispered, "there will be no evidence to find."*

■ Your narrative has a compelling premise about mind control and government corruption that will captivate young readers. However, your story would benefit from more detailed character development—we need to understand Raymond's background and why he's so quick to investigate. Additionally, the timeline feels rushed; consider expanding key moments like Raymond's discovery of the mind control device to build more suspense. Your dialogue is minimal, which limits character relationships. Try including conversations between Raymond and townspeople to show their strange behaviour rather than simply telling us they've changed. The setting needs more specific details to help readers picture this community. The villain's motivation is unclear—why does the government want to control minds? Finally, the resolution happens too quickly without enough obstacles for Raymond to overcome. Create more challenges before he succeeds to increase the satisfaction readers feel when he finally wins.

Overall Score: 41/50

Section 2:

On the 23rd of November, while kids were getting their daily brain blast, the government decided it was time for a change. The government spent all afternoon designing an incredibly advanced technology masterpiece that can control minds in ~~an~~ [a] certain area. #1

It was being tested in a safe area when a man rushed in shouting about how they should destroy the mind controller before it starts working but then the mad scientist switched the masterpiece on and everything changed from posters about ambushing the government to how supportive the government was and how they should keep voting for it.

Two days after the government started controlling the entire community, a man named Raymond who was a tech savvy came to the mind controlled community for a holiday when he got suspicious because of all the campaign signs. He swore to himself that the last time he came here all the campaign signs were against the government. Since Raymond was keen for a mystery, he decided he would try to figure out why all the signs changed.

He started with asking the citizens questions about why they changed their point of view so fast. All of the people said that their point of view just suddenly changed. Raymond knew there was something fishy going on in this city so he investigated everywhere when he finally came to an advancement laboratory. ~~He sneaked into it like a ninja and no one saw him as it was empty. Raymond dashed through the investigation room and rushed into the planning room which had all the things the mad scientist had done for the government.~~ [He sneaked into it like a ninja, unnoticed since the building was empty. Raymond carefully made his way through the investigation room before discovering the planning room containing all the projects the mad scientist had developed for the government.] #2 Raymond scanned through the blueprints of buildings and came across a level 10 technology design. It was for controlling ~~peoples~~ [people's] emotions so that the government would be ruler forever. Raymond finally understood why all the signs changed so fast. His heart leapt. He raced to the machine room and started deleting all the scripting for the mind controller while swiftly ripping the manual for the machine.

Fortunately, the mind controller was completely shut down before some heavily armoured guards rushed in and arrested Raymond for trespassing. Luck was on their side when Raymond was taken to the court before they figured out what he had done, making his punishment shorter. He only had to suffer in prison for 5 weeks while the community went back to thriving. In a couple ~~days~~ [days'] time, the corrupted government lost the vote and a new government team was picked. The new government was grateful ~~of~~ [for] what Raymond had sacrificed so they freed the tech savvy before he experienced 4 days of living in jail. Everyone in the government agreed that Raymond should be given a place in the agency, so Raymond joined and became the technician for the government.

~~Although everything went back to normal, the mad scientist is planning something unstoppable in the shadows. Something inevitable and dangerous~~[Although everything seemed to return to normal, the mad scientist lurked in the shadows, planning something even more unstoppable than before—something inevitable and dangerous.] #3
