

Section 1:

#1 Strengths: Your strong emotional appeal and use of rhetorical questions at the beginning grab the reader's attention. Your passion about the topic comes through clearly.

Weaknesses: Inconsistent tone → Your opening paragraph shifts between formal and informal language, with phrases like "absolutely infuriating" alongside more academic references to "the IPCC." Some sentences are incomplete or unclear, such as "humanity itself is startin to fall of the rails." Your message becomes confusing when you mention climate change being both a "natural affect" and something humans contribute to.

Exemplar: ***How could we continue to destroy our own home when organisations like the IPCC have repeatedly warned us about the consequences of climate change? Every year, human activities accelerate climate change, yet we carelessly ignore these warnings without considering our future.***

#2 Strengths: Your vivid imagery creates a powerful mental picture for readers. Asking readers to close their eyes and imagine a dystopian future is an effective persuasive technique.

Weaknesses: Unclear progression of ideas → Your third paragraph jumps directly to an extreme future scenario without providing the logical steps of how we might get there. Phrases like "toxic clouds that sweep over the ground like phantoms riseing from the dead" are dramatic but don't explain the specific climate impacts that would cause this situation. There are also several spelling errors that distract from your message.

Exemplar: ***Close your eyes for a moment. Imagine the last few million people on Earth huddled together in protective domes, looking out at a barren landscape. Outside, powerful hurricanes and rising sea levels have destroyed our homes, while toxic air makes it impossible to breathe without protection. This future isn't science fiction—it's the path we're currently on if we don't address climate change.***

#3 Strengths: Your conclusion offers a hopeful message and a call to action, which is essential in a persuasive speech. You encourage cooperation and provide a sense that change is possible.

Weaknesses: Vague solutions → Your conclusion states that "we must stop the dark future" and "work on repairs," but doesn't offer specific actions readers can take. Phrases like "preserve the earth for millinias to come" sound inspiring but don't guide readers on what steps to take immediately. The conclusion feels rushed compared to the detailed problems you presented earlier.

Exemplar: ***In conclusion, we must treat our Earth like the precious resource it is. Each of us can make a difference through simple daily actions: reducing plastic use, choosing***

***public transport, supporting renewable energy, and demanding climate action from our leaders. Together, we can slow or even stop this ticking time bomb. By working together, we can preserve our planet for thousands of generations to come.***

■ Your speech shows great passion for climate change, but needs clearer organisation to be truly persuasive. The emotional language you use is powerful, but sometimes overshadows your main points. Try dividing your speech into three clear sections: the problem, the consequences, and the solutions. Your second paragraph mentions wildfires as an example, which is good, but you could strengthen this by adding one or two more specific climate effects. Your final paragraph offers hope but misses the opportunity to give your audience specific actions they can take. Also, try reading your speech aloud to catch spelling mistakes and awkward sentences. Your use of imagery is very strong, especially when asking readers to imagine the future. With some polishing, your important message will come through more clearly and inspire others to take action.

Section 2:

## CLIMATE CHANGE SPEECH

How could we? How could we and why ~~are~~ [are we] destroying our own ~~homes~~ [home]? This is ~~absolutely~~ [absolutely] infuriating for me when I see people ~~walking~~ [walking] up the streets, polluting the pathway and contributing to climate change. ~~humanity~~ [Humanity] itself is ~~startin~~ [starting] to fall ~~of~~ [off] the rails and lean towards its own extinction. How do we still continue to destroy our ~~homes~~ [home] when organisations like the IPCC give out their constant warnings and solutions. ~~WE~~ [We] are ignoring the sheer fact that in a few centuries, if we continue to go along with climate change, the world as we know it ~~has gone~~ [will be gone]. Climate change is a very slow natural ~~affect~~ [effect] that would only destroy the world in millions and millions of ~~generation~~ [generations]. But thanks to humanity, we ~~ave~~ [have] contributed to this natural poison. ~~Reaserch~~ [Research] says that ~~by~~ every year, we humans are ~~creating the increase in climate change grow~~ [making climate change] higher and higher. Despite all ~~the things~~ [these warnings], we just shrug it ~~of~~ [off] without a care about our future. We are actually letting our future selves take the burden and ~~to~~ struggle with it~~,~~ [.] ~~the~~ [The] future will end with chaos and cries of anguish. #1

Because of climate change, we have lit a bomb and we will suffer all the ~~consequences~~ [consequences]. Humanity has created monsters in nature. For example, because of climate change, the world is getting warmer and ~~is~~ [this] a [contributes] ~~contribution~~ to the hundreds of ~~wildfire~~ [wildfires] that get ~~ingited~~ [ignited] every week. ~~and~~ [And] every year, the fires get worse ~~just like~~ [as we saw with] the ~~hollywood~~ [Hollywood] fire that happened a few months ago.

We receive all these ~~warnigs~~ [warnings] and yet despite their urgency, we still ignore the obvious.

For one second, close your eyes. Imagine humanity all huddled ~~together~~ [together] as the last few millions of people struggle and compete ~~on~~ [for] life. Humanity is huddled in domes and squashed ~~together~~ [together] like a group of penguins. Everyone is crying and ~~are~~ [is] in anguish as they look out to see the toxic clouds that sweep over the ground like phantoms ~~riseing~~ [rising] from the dead. Every home is deserted and ~~earth~~ [Earth] is in ruins. Everyone hates ~~early~~ [earlier] ~~human~~ [humans] for creating a ~~time-bomb~~ [time bomb] that has exploded in what could have been paradise. ~~Its~~ [It] is a dream for them to see a green patch of grass. Everywhere outside the dome, ~~you-ee~~ [you see] waves rocking and ~~thrashing~~ [thrashing] on the coastlines while hurricanes level the ground and scrap everything ~~it~~ [they] ~~comes~~ [come] across. And in a few years, humanity falls silent. Humanity could not survive its ~~consequences~~ [consequences]. Their ~~body~~ [bodies] lay down in regret, pain and ~~eternal~~ [eternal] suffering. They all look back in hate as they think about people like us. Now open your eyes. #2

How do you feel now as you imagined a clear and ~~inevetable~~ [inevitable] doom that humanity has started. We ~~ean~~ [can't] stop climate change fully but we can slow it for as long as we can. We are flying too close to the sun here. We are interfering with the plug of ~~earth~~ [Earth] as we relentlessly tug on it. We are forcing ~~earth-of~~ [Earth beyond] ~~it~~ [its] limits.

In my conclusion, we should take care of the ~~earth~~ [Earth] as it is a ~~plant~~ [planet] that needs ~~every~~single [every single] one of you. So we must stop the dark future and work on repairs to this planet to make it sustainable, not ~~poluted~~ [polluted] and to start working against climate change. It is my belief that if we work ~~together~~ [together] we may slow down or maybe entirely stop this ticking time bomb. We must put an end to this but only if we contribute and actually focus on this danger that threatens humanity. ~~i~~ [I] hope you ~~learn~~ [learned] something and now want to help preserve the ~~earth~~ [Earth] for ~~millinias~~ [millennia] to come. #3
