

# Writing Feedback

## DAY 10 | 25th of April | HOLIDAY WRITING HOMEWORK

---

### Section 1:

#1 "Imagine a world where every choice we make contributes to a cleaner, brighter tomorrow. What if the power to protect the oceans rests in your hands? It's time to rethink, reinvent, and lead the way toward a future free from the shackles of plastic waste."

Strengths: Your opening uses compelling rhetorical questions that immediately engage the reader. The imagery of "shackles of plastic waste" creates a powerful metaphor.

Weakness: Emotional depth → Your introduction, while attention-grabbing, could benefit from a more specific emotional connection. Phrases like "cleaner, brighter tomorrow" are somewhat generic. *Imagine the vibrant coral reefs teeming with life and crystal-clear waters that future generations deserve to inherit—this is the world your choices can create.*

#2 "Every year, more than 8 million tons of plastic infiltrate our oceans, suffocating marine life, polluting habitats, and disrupting food chains. Sea turtles mistake floating plastic bags for jellyfish. Birds ingest bottle caps instead of nourishing food."

Strengths: Your use of specific examples and statistics adds credibility to your argument. The vivid descriptions of animal suffering effectively appeal to the reader's emotions.

Weakness: Argumentative progression → The impact statements feel somewhat disconnected from one another. The paragraph jumps from statistics to examples without clear linkage. *Consider how these 8 million tons translate to approximately one rubbish truck of plastic dumped into our oceans every minute, creating an underwater nightmare where once-pristine habitats become plastic graveyards.*

#3 "The oceans speak a universal language of life. Let's honor that language by becoming stewards of their health and vitality. A single drop can raise ripples; together, we can create waves of transformation."

Strengths: Your conclusion effectively uses water metaphors that tie beautifully to your ocean theme. The call to action is inspirational without being preachy.

Weakness: Concrete direction → While poetic, your conclusion lacks specific next steps for the reader. The phrase "becoming stewards" is vague. *Join our community cleanup this Saturday at Brighton Beach or visit OceanGuardians.org to discover how your daily choices can help reduce ocean plastic by 30% within a year—your actions today create the ripples that become tomorrow's waves of change.*

■ Your piece demonstrates a passionate commitment to ocean conservation and shows promising persuasive techniques. The introduction effectively hooks readers, but you could strengthen your argument by developing a more cohesive narrative throughout. Consider weaving your extended metaphor of "shackles" and "freedom" more consistently across paragraphs. Also, your examples could benefit from more personalisation to help readers connect their individual actions directly to ocean outcomes. Try incorporating more sensory details that transport readers to both the beauty of healthy oceans and the devastation of plastic pollution. Additionally, your solutions section could be expanded with more innovative approaches beyond the common suggestions. Remember that concrete examples and specific calls to action often leave the strongest impression on readers.

## Section 2:

Imagine a world where every choice we make contributes to a cleaner, brighter tomorrow. What if the power to protect the oceans rests in your hands? It's time to rethink, reinvent, and lead the way toward a future free from the shackles of plastic waste.

#1 The time has come for bold action. Plastic pollution is wreaking havoc on our planet, especially on marine ~~ecosystems~~ [ecosystems] that are vital to life on Earth. Every year, more than 8 million tons of plastic infiltrate our oceans, suffocating marine life, polluting habitats, and disrupting food chains. Sea turtles mistake floating plastic bags for jellyfish. Birds ingest bottle caps instead of nourishing food. The damage is pervasive and heartbreaking.

But we are not ~~poerless~~ [powerless]. In fact, the most impactful solutions often begin with individual choices that ripple outward to spark broader change. By committing to simple yet profound actions, we can collectively turn the tide on plastic pollution. ~~Swp~~

[Swap] plastic straws for elegant reusable ones made from ~~staiess~~ [stainless] steel, bamboo, or glass. Make reusable bags a fashion statement—decorate them, personalize them, and showcase your ~~comitment~~ [commitment]. Champion initiatives that promote plastic alternatives in your schools, workplaces, and local communities.

Together, we can reimagine single-use plastics, transforming them into relics of the past. Why settle for the mundane when creativity can lead us to bold innovation? Let's cultivate a culture where sustainability becomes second nature—a lifestyle embraced not out of necessity but out of pride.

Join the movement. Share your ideas. Inspire change. Whether it's as simple as saying no to plastic utensils or as grand as leading an environmental campaign, every effort ~~ounts~~ [counts].

#3 The oceans speak a universal language of life. Let's honor that language by becoming stewards of their health and vitality. A single drop can raise ripples; together, we can create waves of transformation.
