

Section 1:

#1 "Firstly, scientific discoveries are the prime foundation of today's technology-driven world. Take the internet for example; what started as an experimental project, revolutionised our education, global communication and future. Renewable energy is another key factor. Scientists are currently finding new ways to use energy responsibly, and protect what was given to us. These examples show that while artistic expression can enrich culture, scientific discoveries are the ones who give us the tools and systems that help power our modern society."

Strengths:

- You've provided clear examples (internet and renewable energy) to support your main point
- Your concluding sentence effectively summarises the paragraph's argument

Comparison clarity → Your comparison between science and art lacks balance. You acknowledge art "can enrich culture" but don't explore this aspect fully before dismissing it. Consider specific artistic contributions to provide a fairer comparison.

Scientific discoveries provide the tools and systems that power our modern society, while artistic expressions have shaped cultural identity and provided psychological wellbeing through movements like the Renaissance and modern design aesthetics.

#2 "Additionally, while artistic expression may inspire and comfort, scientific findings can actually save lives. Discoveries like penicillin and vaccines help fight diseases and bacteria, saving millions of lives. They have even eradicated some viruses like smallpox. Imagine what we can do in the future, we might even be able to cure cancer! And even in the present, vaccines are still continuing to protect our immune systems and fight off bacteria. Can you imagine our world without them?"

Strengths:

- You've included specific scientific examples (penicillin, vaccines, smallpox eradication)
- You've engaged the reader with thoughtful questions

Repetitive elements → You mention vaccines twice and use similar phrasing patterns. This makes your writing seem less developed. Try varying your examples and sentence structures.

Discoveries like penicillin and vaccines have saved millions of lives, even eradicating deadly diseases like smallpox. Future breakthroughs might lead to cancer cures, while current medical technologies continue extending our lifespans and improving quality of life in ways unimaginable a century ago.

#3 "In conclusion, scientific discoveries are a vital part of our lives. While artistic expression inspires and creates small movements, scientific discoveries save lives by creating vaccines, drives economic growth, and provides a deeper, and more concise conclusion for us. Its real-world impact and ability to solve urgent global challenges make it a vital force for improving and sustaining life on Earth."

Strengths:

- You've reinforced your main argument clearly
- You've introduced the broader impact on global challenges

Subject-verb agreement → Your sentence structure contains grammatical issues. "Scientific discoveries... drives... provides" should match the plural subject. Also, there's a missing space after "for us."

In conclusion, scientific discoveries are vital to our lives. While artistic expression inspires and creates cultural movements, scientific advances save lives through medical breakthroughs, drive economic growth, and provide deeper understanding of our world. Their real-world impact and ability to solve urgent global challenges make them essential for improving and sustaining life on Earth.

■ Your piece presents a strong case for the importance of scientific discoveries, but could be improved with more depth and balance. You've included good examples like the internet and vaccines, but your arguments would be stronger if you acknowledged the value of artistic expression more fairly. Also, try to vary your sentence structures and examples to make your writing more engaging. You could improve your conclusion by being more specific about how science impacts our daily lives rather than repeating earlier points. Consider adding a brief counterargument that you then refute to show you've thought about different perspectives. Additionally, you might want to connect your paragraphs with stronger transitions that build on previous points rather than simply adding new ones.

Score: 43/50

Section 2:

Scientific findings are undoubtedly more important than artistic expressions, and are crucial to the development of our modern society. They promote technological practices and drive economic growth, save countless lives and improve public health, and provide a deeper understanding of our beloved world.

#1 Firstly, scientific discoveries are the prime foundation of today's technology-driven world. Take the internet for example; what started as an experimental project, revolutionised our education, global communication and future. Renewable energy is another key factor. Scientists are currently finding new

ways to use energy responsibly, and protect what was given to us. These examples show that while artistic expression can enrich culture, scientific discoveries are ~~the ones who~~ [those that] give us the tools and systems that help power our modern society.

Additionally, while artistic expression may inspire and comfort, scientific findings can actually save lives. Discoveries like penicillin and vaccines help fight diseases and bacteria, saving millions of lives. They have even eradicated some viruses like smallpox. Imagine what we can do in the future, we might even be able to cure cancer! And even in the present, vaccines are still continuing to protect our immune systems and fight off bacteria. Can you imagine our world without them?

Lastly, scientific discoveries give us evidence-based information to help make important decisions like enforcing policies to help reduce climate change. Studies show information and complex research to back up their arguments, which creates stronger resistance and beliefs. Artistic expression is based on open interpretation and is subjective which allows weaker points to form, while scientific research is objective and relies on real proof and evidence. ~~This~~ [This] objectivity is essential for progress and survival in an increasingly complex world.

#3 In conclusion, scientific discoveries are a vital part of our lives. While artistic expression inspires and creates small movements, scientific discoveries save lives by creating vaccines, ~~drives~~ [drive] economic growth, and ~~provides~~ [provide] a deeper, and more concise conclusion for us. ~~Its~~ [Their] real-world impact and ability to solve urgent global challenges ~~make it~~ [make them] a vital force for improving and sustaining life on Earth.
