

Section 1:

#1 "In the modern day, scientific advancements play an exponential role in the field of medical science, saving thousands of lives and paving the way for a better future. But the list of beneficial properties of scientific breakthroughs doesn't still there, but carries on, vastly impacting today's evolving technologies, potentially healing the fading Earth with renewable systems."

Strengths: Your introduction effectively establishes the importance of scientific advancements in medical science. You've included a good range of benefits beyond just medicine, touching on environmental impact.

Grammatical error → The phrase "doesn't still there" creates confusion in your otherwise strong opening. This disrupts the flow of your argument and makes your point less clear. The sentence structure needs revision to maintain the strong foundation you've established in your introduction.

Exemplar: *In the modern day, scientific advancements play an exponential role in the field of medical science, saving thousands of lives and paving the way for a better future. The beneficial properties of scientific breakthroughs extend beyond medicine, vastly impacting today's evolving technologies and potentially healing our fading Earth with renewable systems.*

#2 "Furthermore, scientific advancements have the power to invent new technologies that are groundbreaking and contribute heavily towards a more renewable future. Currently we all cherish our world, but as we speak, the world is plunged in darkness with pollution and crises plaguing the world."

Strengths: Your transition is effective with "Furthermore" and you make a compelling connection between scientific advancement and environmental solutions. The contrast between cherishing the world and its current state creates impactful imagery.

Repetitive language → You've used "world" three times in close succession, which creates redundancy. This repetition weakens your otherwise strong environmental argument and makes your writing sound less sophisticated.

Exemplar: *Furthermore, scientific advancements have the power to create groundbreaking technologies that contribute heavily towards a more renewable future. While we all cherish our planet, it currently faces overwhelming challenges from pollution and numerous environmental crises threatening its stability.*

#3 "Moreover, artistic expression is unmatched towards the countless aids that advancements bring in the medicinal field. Simply put, any artworks cannot bring relief of disease or serious pain but the inventions like the cannula can remedy previously thought cureless diseases."

Strengths: You've maintained good paragraph structure with the transition word "Moreover" and effectively established a direct comparison between art and medicine. Your specific example of the cannula adds credibility to your argument.

Unclear comparison → The phrasing "unmatchable towards" doesn't clearly express the comparison you're trying to make between artistic expression and medical advancements. This creates confusion about your central argument and weakens the impact of your important point.

Exemplar: *Moreover, artistic expression, while valuable, cannot match the countless benefits that advancements bring to the medicinal field. Simply put, while artworks may provide emotional comfort, they cannot directly relieve disease or serious pain, whereas medical inventions like the cannula can remedy conditions previously thought incurable.*

■ Your piece presents a thoughtful comparison between scientific advancements and artistic expression, with a clear position favouring scientific progress. To improve the substance of your writing, consider developing a more balanced argument by acknowledging specific values of artistic expression before explaining why science still takes precedence. For instance, in paragraph two, you could briefly mention how art provides emotional healing before explaining why medical interventions are ultimately more crucial. Additionally, your final paragraph would benefit from a stronger conclusion that reinforces your main points instead of introducing new ideas about economic growth. Try to create clearer links between your paragraphs so each one builds logically on the previous point. Also, your second paragraph about the asthmatic child creates a powerful image, but you could strengthen it by connecting it more clearly to your overall argument about science versus art.

Score: 44/50

Section 2:

In the modern day, scientific advancements play an exponential role in the field of medical science, saving thousands of lives and paving the way for a better future. ~~But the list of beneficial properties of scientific breakthroughs doesn't still there, but carries on~~ [But the list of beneficial properties of scientific breakthroughs doesn't end there; it continues], vastly impacting today's evolving technologies, potentially healing the fading Earth with renewable systems. Public health is also an essential factor that we must truly consider as one of the historical advancements that have been made for the better, saving lives and significantly lowering mortality rates and letting the doctors of tomorrow gain plentiful access to dozens of lifesaving medicines. These are feats that no self artistic expression could even replicate or surpass, though possible to be a remedy, medical advancements outweigh these benefits by improving health throughout every being in the world.

#2 However, I certainly must concede the fact that no artwork or voice, however soothing or transcendent may ever save a child's life. Just imagine, parents surrounding their child, his lips fading

into an eerie pallid blue, his eyes slowing with each and every blink. His young chest heaves in struggle as asthma looms over his life, the suffocating presence of sorrow emanating through the room. No drawing however fixating and curing, can ever prevent this ongoing struggle whereas medicinal research has proven that it can instantly save lives with just one simple injection or vaccination. No parent would trade their beloved's life for a painting that simply cannot fix the situation albeit considering the mesmerising effects. The child's life would eventually be saved by the toil and hard work spent in the lab for scientists that sacrifice so much to make the world a better place.

#1 Furthermore, scientific advancements have the power to invent new technologies that are groundbreaking and contribute heavily towards a more renewable future. Currently ~~we all cherish our world, but as we speak, the world is plunged in darkness with pollution and crises plaguing the world~~ [we all cherish our environment, but as we speak, our planet is plunged in darkness with pollution and crises plaguing our existence]. However, thanks to the field of scientific and medical advancements newer technologies are being developed to combat such problems and ongoing issues. Additionally, science has previously innovated and invented crucial technologies. Take for reference, penicillin, this life saving antibiotic aided substantially in the world wars, bringing relief and less need for imminent care but rather just one simple vaccination. This thoroughly proves my point as no artistic features can save lives on a large scale or save the world as we know it.

#3 Moreover, artistic expression ~~is unmatched towards~~ [cannot compare with] the countless aids that advancements bring in the medicinal field. Simply put, any artworks cannot bring relief of disease or serious pain but the inventions like the cannula can remedy previously thought cureless diseases. One small creation can lead to large scale life saving and aids in illnesses, but a portrait would simply entertain someone. One small change makes a big difference unlike art however transcendent and perfect. This is why undoubtedly, disease prevention is far more important than artistic self expression which only momentarily brings joy.

Therefore, artistic self expression falls short of the numerous benefits that medicinal advancements bring, whether it be technological advancements that save the world or lives, substantial economic growth from the health benefits therefore selling more. This is why scientific advancements are more valued than artistic expressions.
