

## Section 1:

#1 "Imagine yourself rush into a room from a hot day, as you feel the smooth touch of the air conditioning. This cool indoor breeze is the perfect way to cool down your body. If it's gone you'll melt like in lava. This amazing futuristic tool will always be the number one cooling method indoors."

Strengths: Your opening creates a relatable scenario that draws the reader in. You effectively appeal to the reader's senses with "smooth touch" and "cool indoor breeze".

Grammatical inconsistency → Your opening sentence has an error with "rush" instead of "rushing", and there are missing commas. This affects the flow of your introduction and makes it harder for readers to follow your ideas. The sentence "If it's gone you'll melt like in lava" also needs more precise language.

***Imagine yourself rushing into a room on a hot day, feeling the smooth touch of air conditioning. This cool indoor breeze is the perfect way to cool your body down. Without it, you'd feel as though you were melting in the summer heat.***

#2 "This machine is powered by electricity, but barley uses any of it. Air conditions are very sustainable pollution-free, and it can not cause any damage to the earth. This is an instant yes to anyone who happens to see this in a store."

Strengths: You've attempted to address environmental concerns which is important for persuasive writing. Your enthusiasm for the product comes through clearly.

Spelling and clarity issues → There are spelling errors ("barley" instead of "barely") and unclear statements about environmental impact. The phrases "instant yes" and "staring at you in the face" are informal expressions that reduce the persuasiveness of your argument.

***This machine is powered by electricity but barely uses any. Air conditioners are sustainable, pollution-free devices that cause minimal environmental impact. Anyone visiting a store would find this an attractive option for their cooling needs.***

#3 "The air conditioning, uses high tech temperature readers, to find the average temperature of your area in just one week. One of it's amazing features is how quickly it takes the air from outside, purifies it and makes it cold in less than a second."

Strengths: You've attempted to include technical details about how air conditioners work. You highlight specific features that would appeal to potential customers.

Punctuation and possessive errors → There are unnecessary commas in the first sentence and an incorrect use of "it's" instead of "its". The technical explanation needs more precise language to be convincing.

*The air conditioning uses high-tech temperature readers to find the average temperature of your area in just one week. One of its amazing features is how quickly it takes outside air, purifies it and cools it in less than a second.*

■ Your persuasive piece about air conditioning has a clear structure with an introduction, body paragraphs and conclusion. However, you could strengthen it by adding more specific details about how air conditioners work. For example, in paragraph three, you mention "high tech temperature readers" but don't explain how they work or why they're important. Try adding a short explanation like how the sensors detect room temperature and adjust accordingly. Also, your writing would be more convincing if you included some examples of when air conditioning is especially useful, such as during extreme heatwaves or for people with certain health conditions. You could improve paragraph two by explaining exactly how air conditioners help regulate body temperature instead of just stating that they do. Remember to check your spelling and grammar carefully, as errors can make your arguments less convincing to readers.
