

Section 1:

#1 "In this world we have 6 senses! We have sight, touch, smell, hear, taste and flying. With the new sense flying everything is way more efficient. You might be wondering how can this be possibly more sufficient? Well, here are some reasons why: Flying means we use less vehicles which decreases the amount of greenhouse gases, also if people are flying then there isn't much need for new pathways and roads which means we don't need to cut down nature, there won't be so much traffic so people won't be late for important meetings or interviews."

Strengths: Your introduction effectively establishes the creative concept of flying as a sixth sense. You've also presented clear environmental benefits right from the start.

Weakness: Sentence structure and flow → Your opening paragraph contains several run-on sentences that make your ideas difficult to follow. Multiple ideas are connected with "also" and commas without proper sentence breaks, which affects the clarity of your message.

Exemplar: *"In this world, we have six senses: sight, touch, smell, hearing, taste and flying. With flying as our newest sense, everything has become much more efficient. You might wonder how this is possible. There are several important reasons: flying reduces our reliance on vehicles, which decreases greenhouse gas emissions. Additionally, when people can fly, we need fewer roads and pathways, preserving natural habitats."*

#2 "If people were to fly then we wouldn't use cars or other vehicles so much. Since vehicles produce lots of green house gas the amount would decrease since more and more people are starting to fly instead of driving. Around Sydney there are barely any shops which sell cars most shops are filled with gear for flying. If you ever fly around, you might see flying workers holding coffee-colored ropes wearing neon yellow and amber. The ropes hold a flowery fragrance making the air sweet fresh. Some also give out the taste of food making the air tangy depending on what food or scent"

Strengths: Your description of flying workers with scented ropes shows great creativity and connects well with the multi-sensory theme. You've also provided a specific local example by mentioning Sydney.

Weakness: Paragraph organisation → The paragraph shifts abruptly from discussing environmental benefits to describing flying workers with scented ropes, without a clear connection between these ideas. The final sentence also ends abruptly without proper punctuation.

Exemplar: *"Since vehicles produce large amounts of greenhouse gases, our shift toward flying has significantly reduced these emissions. In Sydney, car dealerships have become rare, replaced by shops selling flying gear. While travelling through the air, you might notice workers in neon yellow*

and amber uniforms, holding coffee-coloured ropes that release flowery fragrances, making the air sweet and fresh."

#3 "Like I said more people fly now mostly everybody does to see some bird migrate in Spring since it is way to cold to be flying in Winter. This means for people who have important job interviews or meetings and go by car since who want to mess their hair or look very messy when you go for a job interview? No need to worry about traffic since the roads only have about 10 to 15 cars and high ways have about 20."

Strengths: You've thoughtfully considered seasonal variations in flying habits and practical considerations like appearance for job interviews. This shows you're thinking about the realistic implications of your creative concept.

Weakness: Logical consistency → This paragraph contains contradictory information about who uses cars versus flying. You first suggest "mostly everybody" flies, then indicate people drive to job interviews, but don't clearly explain this contradiction or how the transportation systems work together.

Exemplar: *"Most people fly regularly now, particularly to witness bird migrations in spring, though many avoid flying during the cold winter months. For special occasions like job interviews, where maintaining a neat appearance is important, some people still choose to drive. Fortunately, with roads now carrying only 10-15 cars in city centres and about 20 on highways, traffic congestion has become a thing of the past."*

■ Your creative piece shows wonderful imagination in exploring how flying as a sixth sense would transform our world. To strengthen your writing, consider organising your ideas more carefully within each paragraph. Also, try developing your sensory descriptions further by exploring how flying affects each of the original five senses more consistently throughout. You could add details about how the world looks different from above, the feeling of air currents against skin, or the sounds of wind rushing past ears. Additionally, you might want to consider addressing potential challenges of flying (like weather conditions or air traffic) to make your world-building more believable. Try connecting your paragraphs with clearer transitions to help your reader follow your thinking from one point to the next. Expanding on the social changes that flying would bring to communities could also add depth to your creative vision.

Overall Score: 42/50

Section 2:

In this world we have 6 senses! We have sight, touch, smell, ~~hear~~ [hearing], taste and flying. With the new sense flying everything is way more efficient. You might be wondering how can this be ~~possibly more sufficient~~ [possibly more efficient]? Well, here are some reasons why: Flying means we use less

vehicles which decreases the amount of greenhouse gases, ~~also~~ [Additionally,] if people are flying then there isn't much need for new pathways and roads which means we don't need to cut down nature, ~~there won't be~~ [and there isn't] so much traffic so people won't be late for important meetings or interviews.
#1

~~If people were to fly then we wouldn't use cars or other vehicles so much.~~ [With people flying, we use cars and other vehicles much less frequently.] Since vehicles produce lots of ~~green house gas~~ [greenhouse gases,] the amount would decrease since more and more people are starting to fly instead of driving. Around Sydney there are barely any shops which sell cars [—] most shops are filled with gear for flying. If you ever fly around, you might see flying workers holding coffee-colored ropes wearing neon yellow and amber. The ropes hold a flowery fragrance making the air sweet ~~fresh~~ [and fresh]. Some also give out the taste of food making the air tangy depending on what food or scent [.] #2

Pathways are barely touched [—] why make more? Nature is finally increasing to how it was a few years ago [,] birds tweeting while bees go from flower to flower. There are so ~~much~~ [many] fields with wild dandelions growing, if you ever visit one it is almost like tasting the flowers. Now instead of hearing the annoying beeps and honks of cars, we are surrounded by ~~natures~~ [nature's] sound which soothes our minds and brings peace [.] We ~~se~~ [see] less construction on roads nowadays [,] just some construction to fix the roads we still have.

~~Like I said~~ [As I mentioned,] more people fly now [—] mostly everybody does [—] to see some ~~bird~~ [birds] migrate in Spring since it is ~~way to~~ [far too] cold to be flying in Winter. This means for people who have important job interviews or meetings ~~and~~ [they] go by car since ~~who want~~ [who wants] to mess their hair or look very messy when you go for a job interview? No need to worry about traffic since the roads only have about 10 to 15 cars and ~~high ways~~ [highways] have about 20. #3

This helps humans to help ~~earth~~ [Earth] without even knowing since we are reducing greenhouse ~~gas~~ [gases]. Just like Bessie Coleman said, "The air is the only place away from prejudices". Now do you see how helpful flying is to us and ~~earth~~ [Earth]?
