

Greetings,  
The Student Council Leader,

Our school, always one step ahead of the others, has recently employed a robotic school system. Designed to ring bells, turn heaters on and off, and to serve lunches have started to malfunction. What began as a slight annoyance like bells started ringing 5 minutes early to significant problems like lunches that have a strange, metallic ting to chaotic breakdown like school starting at 12 and ending at 1. It has absolutely gotten out of control, and our uniforms, which we used to wear with pride, eroded to a symbol of shame. This system has to stop.

To begin with, I present to you our new automated heaters. Our school is designed to stay temperate and chilly for the entire year, and we have installed ventilation and heaters to control the temperature. The heaters used to be controlled by a remote switch, compared to now which is controlled by a system. The temperature of all classrooms is unstable. For instance, the science classroom can be 35 celsius before dropping sharply to 21 celsius within 3 minutes. Or, the maths classroom which is adjacent to the English, can be respectively 20 celsius to a good 34 celsius. I am aware that some students do not mind, but many more have been observed to have a disruptive learning habit, complaining often due to the frequent temperature changes.

Next, the bells and their scheduled ringing time and the schedules. At first, the bells are a little bit off, a minute or two or five. But it has slowly evolved to be completely different times like the starting bell of the day starts ringing 1 hr later, and the lunch bell ringing at 2, when school ends at 3. Not only teachers and students are impacted by this, the schedules of the entire school community are impacted by this. Schedules change so often, that sometimes students don't even get one at all! Or, the schedule is not matching with the current plan and some may find themselves in the opposite point of where they should be.

But, here's a nice resolution and plan to solve this. You could for instance employ some maintenance into the system to prevent it from malfunctioning further and to fix the current problems. Or you could get rid of the entire system all together. It isn't worth the amount of confusion in order to save some bucks.

Therefore, the new automated system at the school has caused more harm than good. While it may at first trick many students, it is crucial for us to stay valiant and observe the damage done by the systems. While the student council promises for actions in the future, we cannot wait. The change starts now!

Kind Regards,
